

75,322 Dead 5,938,318 Injured Recorded in Europe and USA Following COVID Vaccines – Babies and Toddlers Hallucinating and Having Seizures After Shots

Description

EU: The European Medicines Agency (EMA) database of adverse drug reactions is now reporting 46,160 deaths and 4,623,724 injuries following COVID-19 vaccines, while the United States' Vaccine Adverse Events Recording System (VAERS) is now reporting 29,162 deaths and 1,314,594 injuries following COVID-19 vaccines. ([Source.](#))

Search Results

From the 6/24/2022 release of VAERS data:

Found 1,314,594 cases where Vaccine is COVID19

Table

 Event Outcome	 Count	 Percent
Death	29,162	2.22%
Permanent Disability	54,559	4.15%
Office Visit	196,758	14.97%
Emergency Room	121	0.01%
Emergency Doctor/Room	131,013	9.97%
Hospitalized	164,811	12.54%
Hospitalized, Prolonged	402	0.03%
Recovered	347,213	26.41%
Birth Defect	1,116	0.08%
Life Threatening	32,548	2.48%
Not Serious	602,057	45.8%
TOTAL	† 1,559,760	† 118.65%
† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is why the Total Count is greater than 1,314,594 (the number of cases found), and the Total Percent is greater than 100.		

We know that as huge as these numbers are which are official government statistics, that they only represent a very small fraction of the total number of deaths and injuries suffered by those who chose to receive COVID-19 vaccines during the past 18 months.

Last year, Dr. Jessica Rose did a comprehensive analysis to determine the “under-reported factor” in VAERS, and came up with 41X, meaning that the recorded data for adverse reactions to COVID-19 vaccines in VAERS had to be multiplied by 41 to get more accurate numbers. See:

However, now that more time has elapsed since this study was performed, many feel that 41X is significantly too low, and should be closer to 100X, which is the number that was previously used based on a 2011 report by Harvard Pilgrim Health Care, Inc. for the U.S. Department of Health and Human Services (HHS).

Although 25% of ambulatory patients experience an adverse drug event, less than 0.3% of all adverse drug events and 1-13% of serious events are reported to the Food and Drug Administration (FDA).

Likewise, fewer than 1% of vaccine adverse events are reported. Low reporting rates preclude or slow the identification of “problem” drugs and vaccines that endanger public health. New surveillance

methods for drug and vaccine adverse effects are needed. ([Source.](#))

So if we take the publicly available data from VAERS and the European EMA and multiply by 100, these would be the true numbers of adverse events following COVID-19 vaccines: 7,532,200 deaths and 593,831,800 injuries in Europe and the U.S.

46,160 deaths and 4,623,724 injuries in EudraVigilance

The European (EEA and non-EEA countries) database of suspected drug reaction reports is [EudraVigilance](#), verified by the European Medicines Agency (EMA), and they are now reporting 46,160 fatalities, and 4,623,724 injuries following injections of five experimental COVID-19 shots:

From the total of injuries recorded, almost half of them (2,106,816) are **serious** injuries.

“**Seriousness** provides information on the suspected undesirable effect; it can be classified as ‘serious’ if it corresponds to a medical occurrence that results in **death**, is life-threatening, requires inpatient hospitalisation, results in another medically important condition, or prolongation of existing hospitalisation, results in persistent or significant disability or incapacity, or is a congenital anomaly/birth defect.”

A *Health Impact News* subscriber in Europe ran the reports for each of the four COVID-19 shots we are including here. It is a lot of work to tabulate each reaction with injuries and fatalities, since there is no place on the [EudraVigilance](#) system we have found that tabulates all the results.

Since we have started publishing this, others from Europe have also calculated the numbers and confirmed the totals.*

Here is the summary data through July 2, 2022.

Total reactions for the mRNA vaccine **Tozinameran** (code **BNT162b2,Comirnaty**) from **BioNTech/Pfizer**: **21,746 deaths** and **2,387,920 injuries** to 02/07/2022

- 71,125 Blood and lymphatic system disorders **incl. 310 deaths**
- 82,967 Cardiac disorders **incl. 3,147 deaths**

 EudraVigilance - European database of suspected adverse drug reaction reports				 EUROPEAN MEDICINES AGENCY SCIENCE MEDICINES HEALTH		
Last Update: July 02, 2022	Reported Cases	Fatalities	% fatalities to cases	All Multiple Symptoms	Serious injuries	% serious to ALL
Pfizer-BioNTech	1 037 578	21 746	2,10%	2 387 920	1 062 539	44,50%
Oxford/AstraZeneca	504 384	9 241	1,83%	1 308 248	653 809	49,98%
Moderna	310 349	12 143	3,91%	758 215	319 031	42,08%
Janssen	65 298	3 030	4,64%	166 334	70 696	42,50%
Novavax	1 104	0	0,00%	3 007	741	24,64%
Total:	1 918 713	46 160	2,41%	4 623 724	2 106 816	45,57%

*These totals are estimates based on reports submitted to [EudraVigilance](#). Totals may be much higher based on percentage of adverse reactions that are reported. Some of these reports may also be reported to the individual country's adverse reaction databases, such as the U.S. VAERS database and the UK Yellow Card system. The fatalities are grouped by symptoms, and some fatalities may have resulted from multiple symptoms.

Parents Offer Up Their Babies and Toddlers to the Demonic Vaccine Cult – Hallucinations Among Reported Side Effects

Last month (June, 2022) the FDA gave parents authorization to start offering their babies and toddlers to the COVID-19 Vaccine Cult, and injections began in children under the age of 5.

There are currently 476 cases of COVID-19 injuries in this age group in VAERS ([source](#)), although many of these cases were before the authorization was given.

I have listed all current 476 cases on one page that can be [viewed here](#). The most current cases, after the authorization, can be seen at the bottom.

Remarkably, many of the cases listed prior to the authorization, were entries made by health officials because after injecting the child, they found out that the child was under the age of 5, and not yet authorized to receive the shots.

In other words, the parents were so desperate to inject their toddlers, that they lied about their child's age to get the shot, which would have been a dose made for older children, and the health official felt compelled to enter it into VAERS to cover themselves legally after they found out.

Staff was misled by mother, regarding the patient's age. This resulted in the child being vaccinated despite being ineligible (due to being 4). The vaccination process otherwise went without incident. Patient was observation for approx. 15 minutes after, in accordance with current guidelines. Afterwards, the patient left with her mother again without incident. ([VAERS ID 2264666](#))

The patient received a pediatric Pfizer Covid vaccine, but she is only 4 years old, which is under the approved age. The parents falsified the child's date of birth during check in and on the paperwork. They called the pharmacy the next day (4/21/22) to apologize and let us know that she was actually under age. There were no adverse effects reported during the time of the vaccine, at the time of the phone call on 4/21/22 or at the time of the follow up call on 4/25/22. ([VAERS ID 2250179](#))

Patient falsified DOB when registering for vaccination, stating the minor was born 10 days earlier than actual DOB. Guardian consented to the vaccination. Department of Health verified with statistical records the patients actual DOB, which made the vaccine a contraindication. No known adverse reactions noted. ([VAERS ID 2283077](#))

In at least one case, a doctor approved the shot even though it was not yet authorized by the FDA:

No symptoms or adverse events noted. Patient is traveling in June of 2022 with her family. Her parents requested to get her first dose of the vaccine early since she is traveling. Ok'd per Dr. to give a couple of months early. ([VAERS ID 2281214](#))

Cases where the new vaccines were given to the babies and toddlers under the age of 5 after the FDA authorization and there was an adverse reaction are just now starting to trickle in.

In one case, a 2-year-old baby girl started hallucinating within 6 hours of being injected:

Patient developed sudden onset hallucinations (visual, possibly auditory) and psychosis beginning 6 hours after vaccination and lasting for 7 hours, then fell asleep. Reawakened with more hallucinations/psychosis 16 hours after vaccination (6 am today) lasting for another 1.5 hours. Transported to Pediatric ED where psychosis/hallucinations resolved. Examination normal. Remained at baseline (normal) upon discharge from ED. ([VAERS ID 2329230](#))

One mother reported on Twitter that her 8-year-old daughter started hallucinating and having feelings of suicide after the shots.

I never heard my 8 year old talk about suicide or have hallucinations or feeling of bugs crawling on her until we have the #safeandEffective vaccine. ([Source.](#))

Early reports in VAERS show that the poor toddlers are putting up a good fight in trying to reject the shots, but sadly, they are over-matched and sometimes just end up getting jabbed twice for resisting.

Patient moved during vaccination attempt and over half of COVID 19 vaccine was not injected intramuscularly. Patient returned on 6/23/22 to another mobile vaccine clinic to receive full dose appropriate for her age. (3 years old – [VAERS ID 2329682](#))

Vaccinator inserted needle into pt's arm. Mother did not have a good hold and pt moved. Needle came

out before vaccinator was able to inject. Pt was then vaccinated with full dose. (3 years old – [VAERS ID 2327250](#))

Nurse stuck needle in child's arm to vaccinate, but child pulled arm away before vaccine was administered. Nurse wasted that dose and administered the vaccine in the opposite arm. (2 years old – [VAERS ID 2326989](#))

EUA – young moderna dose 1. Patient moved away during administration and only received a partial dose (majority of solution was not injected). Parent informed and clinical team. Patient was re-vaccinated per guidelines. (2 years old – [VAERS ID 2328918](#))

Needle inserted into patients L thigh, but vaccine was not administered. **Patient slapped the syringe** and the needle bent. RN was able to remove entire needle. Small scratch noted on L thigh. (2 years old – [VAERS ID 2325671](#))

[Steve Kirsch reported](#) that nurses told him that many of these children 2 and 3 years old are having seizures.

I'm getting multiple reports from my nurse friends about kids 2 and 3 years old having seizures. It is ONLY happening on vaccinated kids, and symptoms start 2 to 5 days after the COVID vaccine.

Doctors are mystified by a rash of seizures, rashes, etc. happening to 2 and 3-year-old kids.

The only thing these kids have in common is that they were given the COVID vaccine just days earlier (two to five days earlier).

The doctors cannot figure out what is causing the seizures (since it couldn't be the vaccine since those are safe and effective). The medical staff is not permitted to talk about the cases to the press or on social media or they will be fired.

One nurse posted something to the effect of "how is this legal?????" I had to paraphrase to protect the poster.

This is why you are hearing these reports from me. They can't fire me.

There is nothing on the mainstream media about this since the nurses and doctors aren't allowed to talk about it.

This will all come out some day, but for now, everyone is keeping quiet about it and the doctors are instructed to convince the parents that it isn't vaccine related and that they are the only ones having the problem.

Because that's how science works. ([Source.](#))

Meanwhile, state legislators and the U.S. Congress are overwhelmingly passing laws to criminalize anyone who denies that millions of Jews were killed in the Holocaust during WW II, but if you deny the fact that millions of children and adults are being killed and harmed by COVID-19 shots, you can have your own corporate news show and earn tons of money from Big Pharma ads, or you can be given a

job working at the FDA or CDC.
