

Age-stratified COVID-19 vaccine-dose fatality rate for Israel and Australia

Description

Correlation Research in the Public Interest has published a new report entitled “Age-stratified COVID-19 vaccine-dose fatality rate for Israel and Australia”.

The report was authored by Denis G. Rancourt, Marine Baudin, Joseph Hickey, and Jérémie Mercier.

In the report, the vaccine-dose fatality rate (the ratio of vaccine-induced deaths to vaccine doses delivered in a population) from the COVID-19 vaccines is found to increase exponentially with age and to be close to 1% for the oldest age group.

The authors also estimate a global total of approximately 13 million deaths from the COVID-19 vaccines.

The report contains a detailed explanation of the methodology used, with accompanying technical appendices.
