

America's Public Health System Is Utterly Corrupt

Description

USA: A sure sign of a country's collapse is the open corruption of its public and private institutions. When corruption no longer has to be hidden but can be openly flouted, the values and standards that comprised the country's soul have eroded away.

Try to find an American institution that is not corrupt. Even when presented with the Covid threat the US public health system could not rise above the greed for profit. Effective cures, such as HCQ and Ivermectin were demonized and in many states prohibited. Most Covid deaths are the result of non-treatment.

Throughout the alleged "Covid Pandemic" regulatory agencies, health bureaucracies, medical associations, state governors, media, and Big Pharma have acted to prevent any alternative to a vaccine.

From day one the emphasis was on the profits from a vaccine. To get people to submit to an experimental and untested vaccine required the absence of cures. To keep the road open only for a vaccine even supplements such as NAC, which has shown effectiveness as both preventative and treatment of Covid, has been challenged by the FDA in its use as a supplement. In response, [amazon.com](https://www.amazon.com), a major online marketer of dietary supplements removed NAC from its offerings.

The generation of fear was essential to stampeding people to line up to be vaccinated. The fear was supplemented by threats of inability to travel, to attend sports events, to resume working at one's job.

A Covid test, known as PCR, was intentionally run at high cycles known to result in a very high percentage of false positives. These false positives guaranteed a high infection rate that scared people silly. Economic incentives were used for hospitals to report all deaths as Covid deaths, thus greatly exaggerating Covid's mortality.

As you might have noticed, last winter had no reporting of flu cases as flu was added to the Covid statistics.

A number of reports have been published that the Covid vaccine does not prevent some vaccinated people from coming down with Covid. Other reports say that vaccinated people become spreaders of Covid. There are also reports of a large number of deaths and injuries from the Covid vaccine.

In order to suppress the facts and keep the Covid vaccine selling, the Center for Disease Control (CDC), which supported running the PCR test at high cycles in order to inflate the number of Covid cases, runs the PCR test at much lower cycles in the case of infected vaccinated people in order to minimize the number of vaccinated people who came down with Covid.

To further create an artificial picture of the vaccine's effectiveness, asymptomatic and mild infections are excluded from the reporting of vaccinated people who catch Covid. Only vaccinated people who catch Covid who have to be hospitalized or die from Covid are counted among the people who caught Covid despite being vaccinated. However, unvaccinated people with only minor symptoms or false positives from a high cycle PCR test are added to the number of Covid cases.

This is obvious and blatant manipulation of statistics in order to scare people about Covid while reassuring them about the vaccine's effectiveness. Overstating the number of cases among the unvaccinated while simultaneously understating the number of people who caught Covid despite being vaccinated is shameless and protects the contrived picture of the safety and effectiveness of the vaccine.

The falsification of statistics in order to produce massive public fear and the prevention of treatment with known safe and effective cures in order to maximize death rates produced billions of dollars in profits for Big Pharma and associated industries, with Moderna's CEO topping the list of nine new billionaires made rich from the rollout of Covid vaccines. These billionaires rode to their riches on the deaths of hundreds of thousands of people who died from an enforced lack of treatment —mandated

deaths to protect vaccine profits.

Will anything be done about this extraordinary corruption of the American public health system?
