

Another African Leader Targeted by Big Pharma? Madagascan President Survives Assassination Attempt

Description

MADAGASCAR: The Al Jazeera (MSM alert) report below on the assassination attempt of President Andry Rajoelina was from a week ago. See also this report from 5 days ago, titled [Madagascar arrests two French citizens, several others over foiled plot to kill president](#). We remind readers that the Madagascan president had as recently as **March 2021 refused the covid vaccines** for his people in favour of a remedy that was already known to work and have significant potential in the ongoing fight against drug-resistant malaria. See this *South China Morning Post* report titled [‘Nothing to worry about’: Madagascar spurns Covid-19 vaccines in favour of herbal ‘remedy’](#). What President Rajoelina of Madagascar has been promoting as a covid cure is no simple ‘herbal remedy’, on the contrary. From a little digging we’ve done, it sounds like **Madagascar could be its own successful pharmaceutical producer for the entire African continent and for wherever malaria is found.**

We remind readers that the President of Tanzania **John Magafuli** (61) and the President of Burundi **Pierre Nkurunziza** (55) had [both rejected the covid vaccines](#). and both allegedly died of Covid and a heart attack respectively. Haiti’s president **Jouvenal Moise** (53) was assassinated in his home on July 7, having done the same.

Two others get added to this list of slain African leaders – **Hamed Bakayoko** and **Ambrose Dlamini**. See this image below, which we obtained from [Benjamin Fulford’s site](#). We cannot find evidence that Bakayoko (who died of metastasized liver cancer) and Dlamini did refuse covid vaccines, however.

It's worth bearing in mind that **Alexander Lukashenko** was the one who [alerted the world](#) early on that the [IMF was paying countries to lock their peoples down](#). He, too, suffered an [assassination attempt](#) on him, only to be [foiled with Russia's help](#).

We found this interesting piece from [Principia Scientific International](#) from May 18, 2020 in which the ~~Madagasscan~~ president appears to have 'done a' Lukashenko' regarding its **homegrown artemisia** is republished below.

We also offer these scientific links on the power of

artemisia as an effective anti-parasitic medication, especially to **drug-resistant malaria**: [here](#), [here](#) and [here](#). In fact, digging even slightly on this topic shows that **Madagascar could be the centre of anti-malarial medication production based on its own plants and its own expertise**. Drug resistance in the treatment of malaria has become a problem, and artemisia may be the solution, one that is being worked on by chemists already.

Is this part of the equation on the attempted assassination of Rajoelina, who clearly trusts his country's own medicinal products?

Further, this story reveals it wasn't just the attempted assassination of one man but of a group of people in Madagascar politics. Is Big Pharma attempting to remake the political landscape in this country?

President Of Madagascar Exposes \$20M COVID-19 WHO 'Poison Bribe'

Published on May 18, 2020

ADEJAYAN GBENGA GSONG

The President of Madagascar, Andry Rajoelina has alleged that the World Health Organization (WHO) offered a \$20m bribe to see the Covid-19 cure poisoned.

Rajoelina accused the World Health Organisation of a plot to have its COVID-19 Organics, the local African 'cure' for the virus poisoned.

According to his claims, **WHO offered a \$20 million bribe to poison their medicine**, Tanzania Perspective reported on the front-page of its 14th May edition.

The President of Madagascar believes the only reason the rest of the world has refused to treat Madagascar's cure for the coronavirus with urgency and respect is that the remedy comes from Africa.

In an interview with French media, President Rajoelina reportedly said he has noticed what he believes stems from usual condescension toward Africans.

"I think the problem is that (the drink) comes from Africa and they can't admit... that

a country like Madagascar... has come up with this formula to save the world.”

“What is the problem with Covid-Organics, really? Could it be that this product comes from Africa? Could it be that it’s not OK for a country like Madagascar, which is the 63rd poorest country in the world... to have come up with (this formula) that can help save the world?”

“If it wasn’t Madagascar, and if it was a European country that had actually discovered this remedy, would there be so much doubt? I don’t think so.”

— President of Madagascar Andry Rajoelina asserted.

The remedy, COVID Organics, is made from Artemisia, a plant imported into Madagascar in the 1970s from China to treat malaria. Artemisia has had proven success against malaria and according to President Rajoelina, it can cure COVID-19 patients within ten days.

However, the WHO has criticized such natural therapeutic measures against the coronavirus as blind faith. In response to the skepticism with which the WHO is treating the COVID Organics, Rajoelina said, “No country or organisation will keep us from going forward.”

A host of other African countries including, Tanzania, Guinea-Bissau, DR Congo and Niger, have imported the Madagascan-made recipe.

Madagascar says it foiled plot to kill President Andry Rajoelina

Foreign nationals among those arrested over plan to ‘kill and neutralise’ senior political figures, attorney general says.

AL JAZEERA

Authorities in Madagascar have said several “foreign and Malagasy” suspects were arrested over a suspected plot to assassinate President Andry Rajoelina.

Attorney General Berthine Razafiarivony said on Thursday the arrests took place on Tuesday as part of an investigation “into an attack on state security”.

Razafiarivony, addressing reporters, also said the foiled plot included **the “killing and neutralisation” of senior political figures** other than the president.

There was no official confirmation about the nationality of the foreign suspects.

The extent of the plan, or how far advanced, was not immediately clear.

During the country's Independence Day celebrations on June 26, the gendarmerie announced that they had foiled an assassination attempt on their boss, **General Richard Ravalomanana**, who is also Rajoelina's right-hand man.

Rajoelina was sworn in as president of the Indian Ocean island country in 2019 after a hard-fought election beset by allegations of fraud and a constitutional court challenge from his main rival and predecessor Marc Ravalomanana.

The 47-year-old first seized power in March 2009 from Ravalomanana with the backing of the military and remained president of a transitional government until 2014.
