

Boris Johnson hasn't just Lied about Parties; He's also Lied about 90% of Covid-19 ICU patients being Unvaccinated

Description

UK: More than 100 Downing Street staff were invited to a lockdown breaking party in the No 10 garden and told to “bring your own booze”, a leaked email shows.

The revelation heaps fresh pressure on Boris Johnson, who refused to say whether he had attended.

Asked about the event – following Dominic Cummings's allegations last week – Mr Johnson refused to say whether he had attended the 20th May party, insisting that Sue Gray, the senior official charged with investigating rule breaking on various occasions, was looking into the matter.

“All that, as you know, is the subject of a proper investigation by Sue Gray,” he said. Pressed on the subject, he repeated: “All that is a subject for investigation by Sue Gray.” No 10 also denied reports that Mr Reynolds would be moved from his current role.

But lies about parties aren't the only thing the Prime Minister of the United Kingdom has deceived the British public with recently.

A number of media reports have claimed that Intensive care units in the UK are filling up with patients with Covid-19 who are unvaccinated.

This led to the prime minister, Boris Johnson, urging people to get vaccinated to reduce the pressure on hospitals. He said that he had been told by doctors that “as many as 90% of patients with covid-19 in intensive care had not received a booster vaccination.”

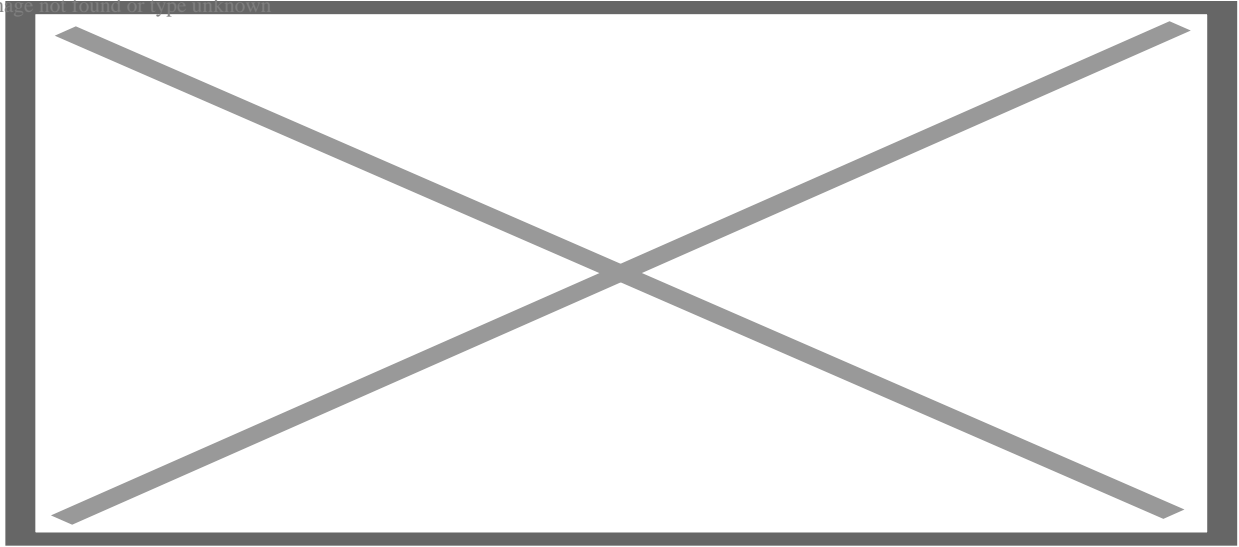

But both the mainstream media and the Prime Minister of the United Kingdom are lying to you.

The UK Health Security Agency (UKHSA) publishes a weekly ‘Vaccine Surveillance’ report containing statistics on Covid-19 cases, hospitalisations and deaths by vaccination status across England over a period of four weeks.

Their latest report – [‘Covid-19 Vaccine Surveillance Report – 2022 – Week 1’](#) – was published on

Thursday 6th January 2022, and it shows that the vast majority of Covid-19 cases, hospitalisations, and deaths between 6th Dec 21 and 2nd Jan 22 were among the triple/double vaccinated population.

[Source – Page 38](#)

The totals number of cases by vaccination status as confirmed by table 10 of the [UKHSA Week 51 Vaccine Surveillance report](#) between 6th Dec 21 and 2nd Jan 22 were as follows –

- Not-vaccinated population = 857,245
- Partly vaccinated population = 163,826 cases
- Triple/Double-vaccinated population = 1,663,628 cases

Image not found or type unknown

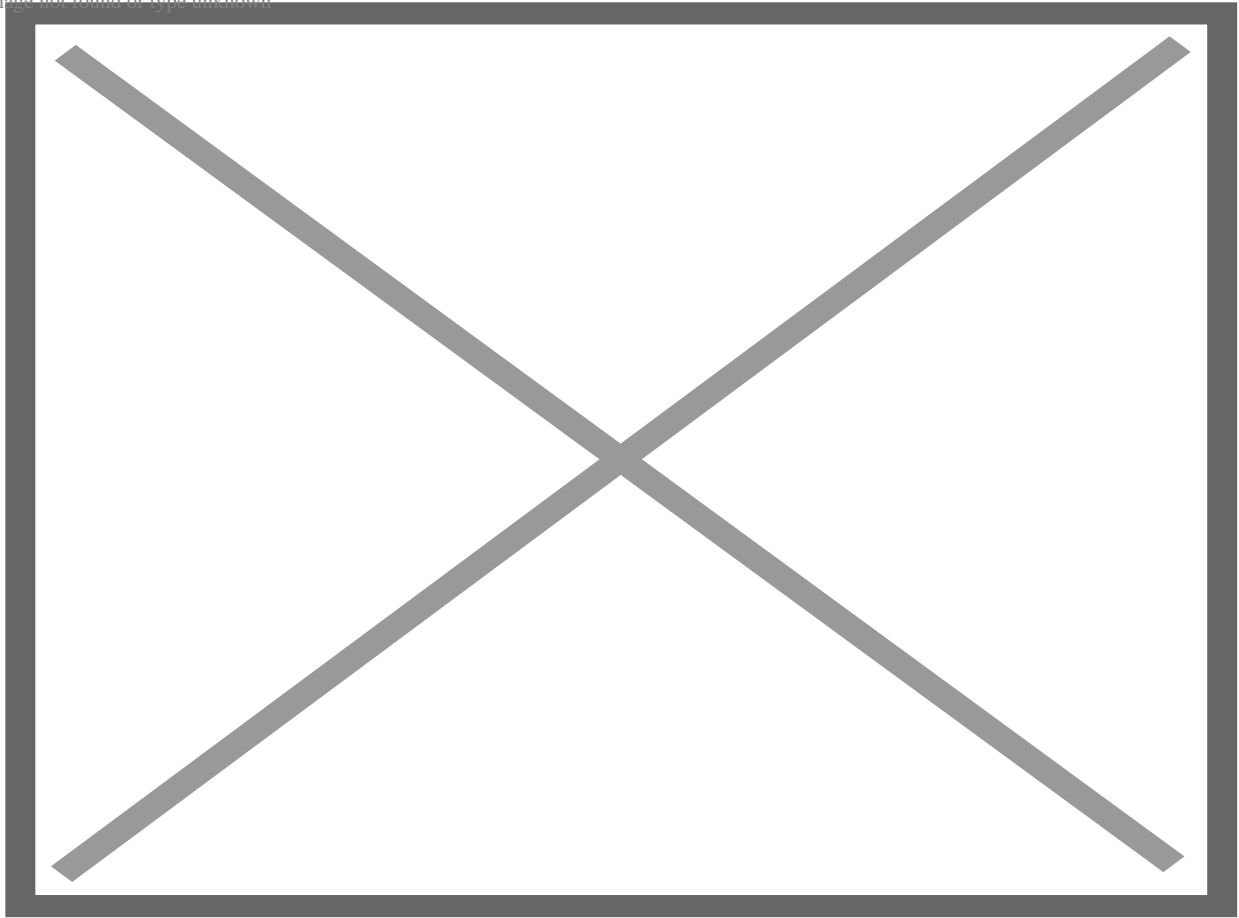

This means the vaccinated population accounted for 68% of Covid-19 cases between 6th Dec 21 and 2nd Jan 22, whilst the not-vaccinated population accounted for 32%.

This is a huge increase on the number of cases that were recorded a month earlier between 15 Nov 21 and 12 Dec 21 in which the vaccinated population accounted for 59%, whilst the unvaccinated population accounted for 49%.

Cases among the unvaccinated population were around half the amount during this four week period compared to the most recent four week period, whilst cases among the vaccinated population were around three times less.

Cases between 15 Nov and 12 Dec 21

Unfortunately the [latest UKHSA report](#) also shows that despite the booster campaign being well underway, the vast majority of Covid-19 hospitalisations were also among the fully vaccinated population between 6th Dec 21 and 2nd Jan 22.

[Source – Page 39](#)

The totals number of hospitalisations by vaccination status for all age groups between 6th Dec 21 and 2nd Jan 22, as confirmed by table 11 of the UKHSA report were as follows –

- Not-vaccinated population = 4,056
- Partly vaccinated population = 508
- Triple/Double-vaccinated population = 5,283

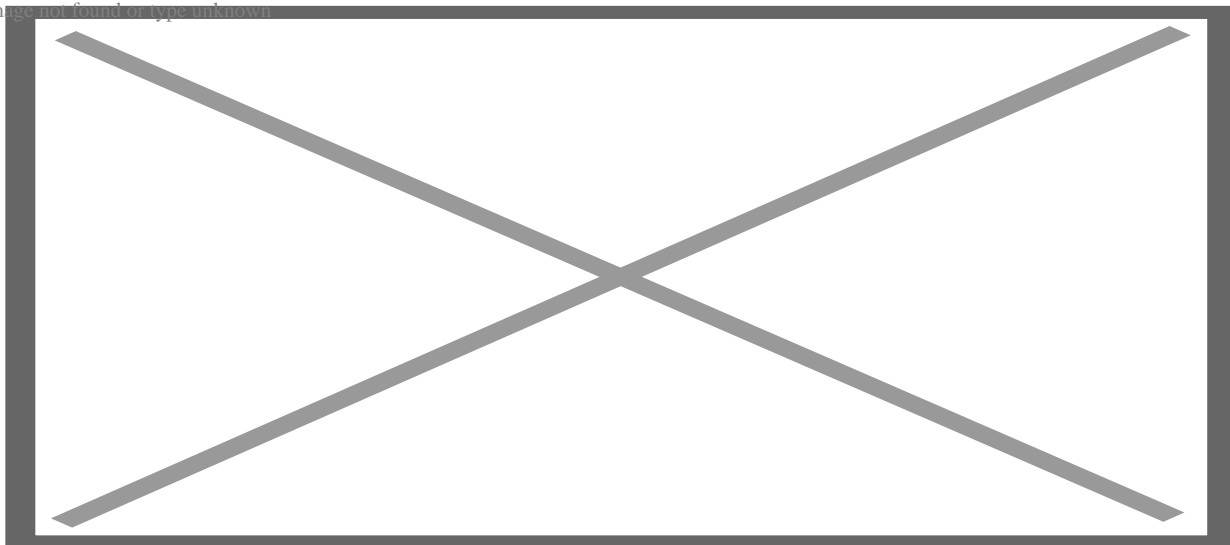

Image not found or type unknown

This means the vaccinated population accounted for 59% of Covid-19 hospitalisations between 6th Dec 21 and 2nd Jan 22, whilst the not-vaccinated accounted for just 41%.

But yet again the difference between the vaccinated and unvaccinated gets much worse when it comes to deaths allegedly related to Covid-19.

Image not found or type unknown

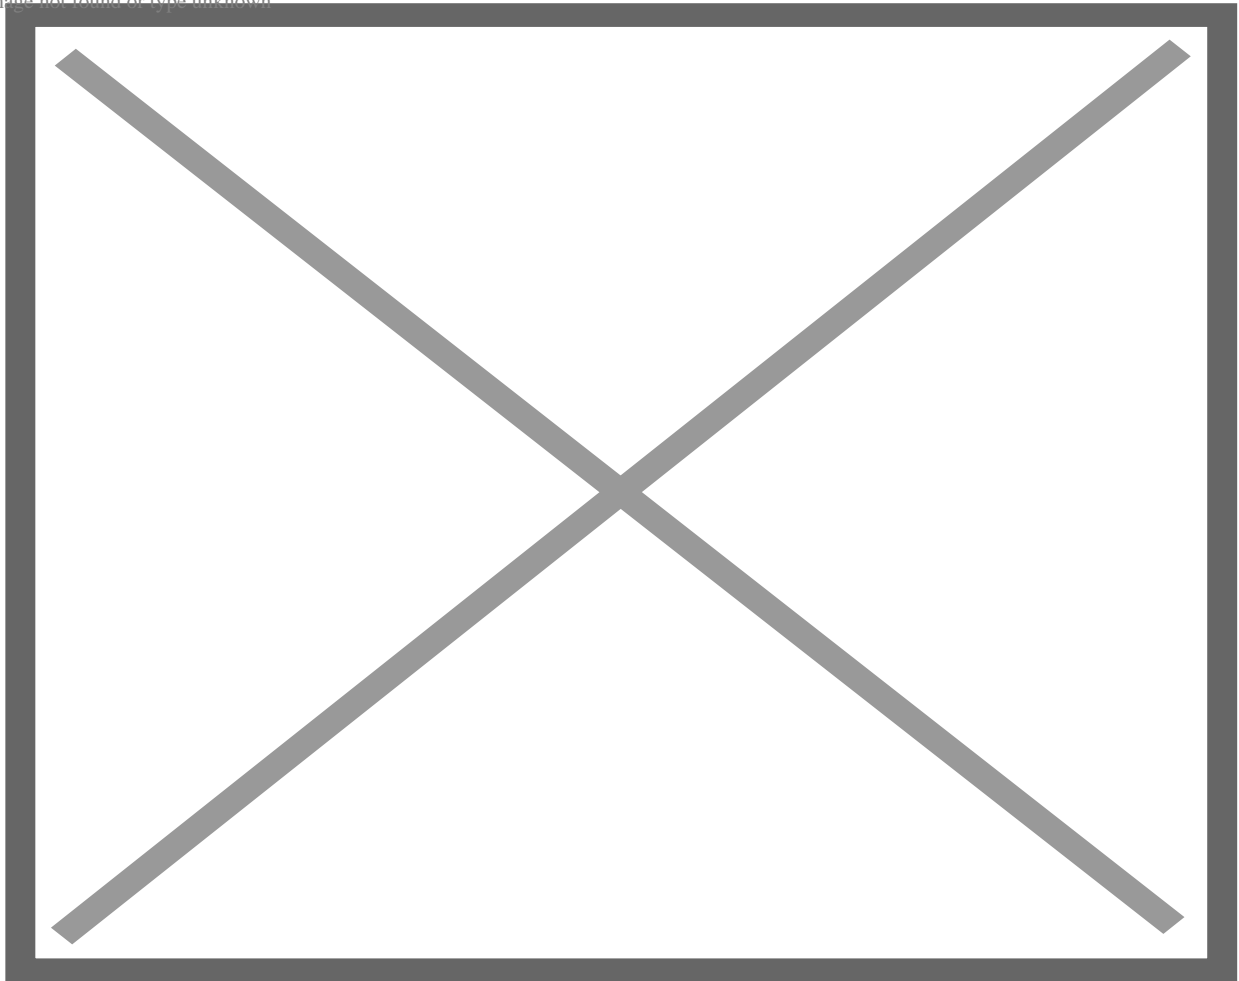

[Source – Page 41](#)

The totals number of alleged Covid-19 deaths by vaccination status between 6th Dec 21 and 2nd Jan 22, as confirmed by table 12b of the UKHSA [report](#) were as follows –

- Not-vaccinated population = 928 deaths
- Partly vaccinated population = 130 deaths
- Triple/Double-vaccinated population = 2,621 deaths

Image not found or type unknown

This means the vaccinated population accounted for 75% of Covid-19 deaths between 6th Dec 21 and 2nd Jan 22, whilst the not-vaccinated accounted for just 25%.

With the vaccinated population accounting for 7 in every 10 Covid-19 cases, 6 in every 10 Covid-19 hospitalisations, and 8 in every 10 Covid-19 deaths, do you really believe the Prime Minister of the United Kingdom and the mainstream media when they tell you that 90% of the people in intensive care with Covid-19 are unvaccinated?
