

BREAKING: C-19 Injections Have Caused Nearly Half a Million Spontaneous Abortions

Description

USA: The latest analysis conducted by Dr. Jessica Rose has resulted with some seriously worrying numbers.

A new analysis compiled by Dr. Jessica Rose reveals a shocking number of spontaneous abortions in pregnant women who've received the COVID-19 jab.

Here's more about the Doctor herself.

"Dr. Jessica Rose has a Post Doctorate in both Biochemistry and Molecular Biology. She has a PhD in Computational Biology and a Masters in Immunology, as well as a Bachelor of Science in Applied Mathematics. These modalities have given her a solid base in which she uses to deep dive into VAERS (Vaccine Adverse Events Reporting System) reports and provide data analysis surrounding the adverse events profile of the COVID injectables."

Her investigation revealed, to date, 416,186 spontaneous abortions due to the experimental injections. She reportedly contacted the CDC but doesn't expect a reply from the agency.

THIS IS BIG [#COVID #Vaccines](https://t.co/iK4TAqydGW) Caused 416,186 Spontaneous Abortions

Since there are 3,527 reports of SA in the US in 2021, this represents 416,186 actual events," explains Steve Kirsch, noting that around 99 percent of these were, in fact, caused by the jabs.

"Using the DMED data, the five-year average was 1,499 codes for miscarriages per year. During the

first 10 months of 2021, it was 4,182. So that's 3.4X the baseline rate (when extended to an annual rate)."

Keep in mind that pregnant women were never even included in the vaccine trials, even though the CDC continues to urge them to get injected in order to "flatten the curve."

"It is medical malpractice to recommend the vaccines to pregnant women," Dr. Rose says. "The CDC repeatedly declared them safe for pregnant women without complete data."

COVID vaccines and pregnancy: > 172,000 spontaneous abortions due to the vaccine
