

BREAKING: NASA Tries To Make Contact With Aliens By Using Unsolicited Nudes!

Description

Scientists collaborating with NASA will send a radio message into space through a high-telescope with information on human life, including a cartoon of two nude people.

The scientific group is led by Jonathan Jian of NASA's Jet Propulsion Laboratory. He shared a paper on the preprint server arXiv.org about the updated Arecibo message to extraterrestrial intelligence in the Milky Way galaxy.

"The 13-page epistle referred to as the "Beacon in the Galaxy" is meant to be a basic introduction to mathematics, chemistry, and biology that draws heavily on the design of the Arecibo message and other past attempts at contacting extraterrestrials," Scientific American reported.

"The transmission also features a freshly designed return address that will help any alien listeners pinpoint our location in the galaxy, so they can—hopefully—kick off an interstellar conversation."

A Beacon in the Galaxy: Updated Arecibo Message for Potential FAST and SETI Projects

[Led Bible](#) reported:

In a bid to connect with [alien life](#) – attempts of which have proven unsuccessful for over 150 years – [NASA scientists](#) are now looking to thirst trap any ulterior life forms out of hiding with the help of a saucy snap.

The group hope to send a cartoon of two nude people out of Earth's atmosphere to peak potential alien's curiosity and encourage communication.

The project, called the 'Beacon in the Galaxy' (BITG), shows the figures of a man and woman, fully naked, with their hands raised in a wave.

On the project's [website](#), the scientists detail: "The proposed message includes basic mathematical and physical concepts to establish a universal means of communication followed by information on the biochemical composition of life on Earth, the Solar System's time-stamped position in the Milky Way relative to known globular clusters, as well as digitized depictions of the Solar System, and Earth's surface.

"The message concludes with digitized images of the human form, along with an invitation for any receiving intelligences to respond."

The code the scientists are using to send the message is called a binary code, which is thought to be as much of a universal language as possible, using a lot of 1s and 0s.

The group explained: "Though the concept of mathematics in human terms is potentially unrecognisable to [extraterrestrial intelligence], binary is likely universal across all intelligence.

"If you look at history, contact between humans and less intelligent organisms have often been disastrous from their point of view, and encounters between civilizations with advanced versus primitive technologies have gone badly for the less advanced," Stephen Hawking, an English theoretical physicist, and cosmologist stated, expressing his concerns about many times humans contacted aliens.
