Preliminary Findings of mRNA Covid-19 Vaccine Safety in Pregnant Persons

Tam T. Shihadeh, M.D., Shih Y. Lin, M.P.H., Tony R. Meyer, M.D., Robert L. Marder, M.D., Christine E. Chen, M.D., Paul M. H. et al., for the COV-001 Pregnancy Unit and Neonatal Outcomes in Published Studies and Fetal Pregnancy Registry Participants.

Among 827 participants who had a completed pregnancy, the pregnancy resulted in a live birth in 723 (87.4%). Spontaneous abortion or stillbirth occurred in 1 (0.1%), and in other outcomes (miscarriage, abortion, and ectopic pregnancy) in 10 (1.2%). A total of 96 of 394 spontaneous abortions (24.3%) occurred before 13 weeks of gestation (Table 4), and 700 of 732 pregnancies that resulted in a live birth (95.7%) were among persons who received their first eligible vaccine dose in the third trimester. Adverse outcomes among 734 live-born infants — including 12 sets of multiple gestation — were preterm births (66 of 636 among those vaccinated before 37 weeks for gestational age [10.4%]), and major congenital malformations (23 of 734 [3.1%]).

Table 4. Pregnancy Unit and Neonatal Outcomes in Published Studies and Fetal Pregnancy Registry Participants.

Pregnancy Outcome	Published Studies ¹	Fetal Pregnancy Registry ²
Pregnancy loss among participants with a completed pregnancy	700 not reported	700 not reported
Spontaneous abortion: <13 wks ³	10-15	19/127 (14.9%)
Stillbirth: ≥20 wks ³	<1	1/127 (0.8%)
Neonatal outcomes among live-born infants		
Preterm birth: <37 wks ³	1-15	66/636 (10.4%)
Fetal loss by gestational age ³	1-15	21/127 (16.5%)
Congenital anomalies ³	1-15	23/734 (3.1%)
Neonatal death ³	0-15	0/124

¹ The population from which these data are derived was not matched to the current study population for age, race, and ethnic group, or other demographic and clinical factors.

² Data on pregnancy loss are based on 827 participants in the pregnancy registry who received an initial Covid-19 vaccine (BNT162b2 [Pfizer-BioNTech] or mRNA-1273 [Moderna]) beginning from December 14, 2020, to January 28, 2021, and who reported a completed pregnancy. Based on 734 participants (82.5%) retained through the study.

³ Data on fetal loss outcomes (Spontaneous abortion, miscarriage, abortion, and ectopic pregnancy) were reported by participants.

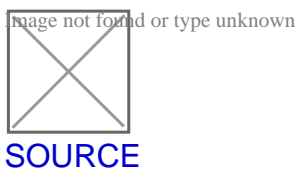

BUSTED! CDC DATA: 82% OF PREGNANT WOMEN WHO GOT AN EARLY MRNA JAB MISCARRIED. CDC SCIENTISTS: IT'S JUST 12%

Description

USA: Less decency and honesty in science than in politics, these days.
I didn't think there's a few levels below politics.

You know when your juice bottle says "100% orange" and the small prints say it's just 50% of fruit "concentrate"? They should be arrested for that.

Now concentrate on this:

If I were to sum it up in words, I'd quote the source of this revelation:

"It is like saying that there were 700 men and 127 women studied and only a small percent got pregnant. Well, from the start 700 could not have gotten pregnant in the first place."

[British oncologist Dr. Carmen Wheatley](#)

Wheatley has just tipped [LifeSite News](#) on this, and I immediately did my own verification, anyone can and should do it.

The result became the cover image for this article, which really is the beginning and the end of the debate, sums up Covidocracy for me.

The data was collected and "arranged" by a team of "CDC experts" who published it in the New England Journal of Medicine in April 2021. It remained overlooked until mid July, when NEJM followed up with a shameless editorial that questioned nothing, just furthered the lie. And that's when the small prints caught some diligent eyes and went to become our big headline today, as they deserve.

Evil is in the small prints, again, that's why they hate you when you carefully read inserts and labels.

This is Covidiocracy Science for you, this is the highly esteemed New England Journal of Medicine, up there, close to the British Medical Journal as reputation.

Mind that 82% is 3x the normal rate. All that extra dead babies blood is on the hands of CDC, NEJM and the likes of.

And we really have to extrapolate this example to all walks of life, because they are all infected with the same corruption. None as blatantly as science, but you still can't rely on anything you can't research and verify yourself.
