

CDC vote to add covid jabs to childhood immunization schedule “is corruption,” says Dr. Robert Malone

Description

When it comes to adding Wuhan coronavirus (Covid-19) “vaccines” to the official immunization schedule for children in the United States, Dr. Robert Malone has three words for it: *this is corruption*.

Malone wrote an op-ed this week blasting the U.S. Centers for Disease Control and Prevention (CDC), which is planning to add the gene-editing shots to the list of injections required for children in America to attend school.

“I am shocked by the malfeasance,” Malone says about the CDC’s plan of action. “I have no trust left at all in our public health. It is broken.” (Related: The CDC is [being sued](#) for refusing to share incriminating data about covid injections.)

In case you missed it, the CDC’s Advisory Committee on Immunization Practices (ACIP) voted unanimously 15-0 this week to recommend that children get all “vaccines and boosters” for the Wuhan Flu. Some states require that children stay up-to-date on the CDC immunization schedule, which means covid jabs are about to become mandatory for millions of U.S. children.

“It is important to recognize that this is a work-around because Congress is not funding more jabs into arms,” Malone says. “If this product is put on the childhood schedule, Congress does not have a say in the funding.”

“Furthermore, if the emergency use authorization (EUA) vanishes, then the liability of the companies would continue under the childhood schedule. This is corruption.”

Tell the CDC: NO to covid injections on the immunization schedule

Malone believes that the ACIP is unlikely to “go there” since these are still unlicensed products. He says he does not know if an EUA injection can even be added to the schedule since it has never been

done before.

Then again, there are a *lot* of things that have never been done before that quickly became the norm once the government and the media started blasting propaganda about a scary new “virus” that threatened to kill everyone.

It is highly likely that covid jabs will be added to the CDC’s immunization schedule for children, Malone says. Public school systems will then start mandating them under the pretext that the government has officially sanctioned them as a necessary injection for public health.

“This is all being done at the last minute and basically behind the backs of the public, as this received virtually no media attention prior to the vote,” Malone says. “I do not believe that this vote was announced to the public beforehand.”

“The CDC very recently opened up its scheduled vote for public comment and received thousands of negative comments.”

Anyone can comment against the addition of covid injections to the CDC schedule, by the way. We encourage you to do so at [this link](#).

As usual, there is no actual science behind the addition of covid jabs to the CDC immunization schedule. The proposition is entirely based on regulatory capture, budgetary issues, and of course politics.

The adverse events caused by the jabs are too numerous to list for the purposes of this article, but they are *many*. Meanwhile, the risk of covid, especially in children, is *zero*.

Most other countries in the world have completely stopped jabbing children for Chinese Germs, and yet U.S. politicians and their puppet masters are forging full steam ahead with plans to force them on all human life both in and out of the womb.

“If they add these jabs to the childhood schedule, it will completely break the trust of the American family in the CDC, as it should,” Malone says.
