

Comparison of Official Government Reports Suggest Fully Vaccinated Are Developing Acquired Immunodeficiency Syndrome

Description

USA: A comparison of official government reports in the United Kingdom suggests that those who are fully vaccinated are quickly developing acquired immunodeficiency syndrome (AIDS). Complete immune system degradation (100% failure) can be expected by Christmas.

[The latest United Kingdom PHE Vaccine Surveillance Report](#) figures on COVID cases show that the doubly vaccinated 40-70-year-olds have already lost 40% of their immune system capability compared to unvaccinated people. Their immune systems are deteriorating at around 5% per week (between 2.7% and 8.7%). If this continues then 30-50-year-olds will have 100% immune system degradation, meaning zero viral defense by Christmas, and all doubly vaccinated people over 30 will have completely lost their immune systems by March of next year.

The 5 PHE tables below from the Vaccine Surveillance Report are separated by 4 weeks and clearly show the progressive damage that the vaccines are doing to the immune system's response.

[Weekly Decline in doubly vaccinated immune system performance compared to unvaccinated people...](#)

If these figures are correct, then everybody over 30 who has taken two shots of the COVID vaccine will

have lost 100% of their entire immune capability (for viruses and certain cancers) within 6 months. Those aged 30-50 will have lost their immune system in its entirety by Christmas. These people will then effectively have full-blown acquired immunodeficiency syndrome (AIDS).

The boosters are only going to compound this issue. If you have taken a booster shot, these figures show that you are giving yourself an even faster progressive form of acquired immunodeficiency syndrome (after a couple of months of effectiveness).

Table 2. COVID-19 cases by vaccination status:

Cases reported by specimen date between week 32 and week 35 2021 –

Pfizer originally claimed a 95% efficiency for their vaccine (calculated as in the last column above). The

figures above indicate that their figures may well have been correct immediately after vaccination (the younger age groups have had the vaccine for the shortest time).

But the figures above also show that the vaccines do NOT only lose efficiency over time down to zero percent efficiency, they progressively damage the immune system until a negative efficiency is realized. They presently leave anybody over 30 in a much worse position than they were before vaccination. For more, see [here](#).

Dr. Thompson said if someone told him to look at this lab; what does it tell you? He would say: "This person has autoimmunity." The doctor hopes he's wrong. But the data is far from comforting.

Do your research and make sure you know what's happening. People are being coerced into taking these shots, and they are being shown to cause full-blown AIDS, for which there is no cure. Look into everything. Don't just take my word for it. Please follow the links, learn, and understand. Critical thinking is necessary for the times we live in: the age of deception.
