

Effects of the COVID Jab – Interview with Dr. Ryan Cole (VIDEO 84 min)

Description

Dr. Ryan Cole, an anatomic clinical pathologist with a subspecialty in skin pathology and postgraduate Ph.D. training in immunology, has been on the frontlines exposing the fraudulent COVID narrative.

In the wake of the COVID jab rollout and additional boosters, a number of health conditions are on the rise, including cancer, most notably cancers of the uterus, endometrial cancers, and very aggressive blood and brain cancers

Cancer has been on the rise for decades, thanks to dietary factors, but the COVID jabs appear to dramatically accelerate the disease process. Many doctors report cancer patients with stable disease, and those who have been in remission for years, will suddenly and rapidly develop Stage 4 disease

A military whistleblower has come forward with data from the Defense Medical Epidemiology Database (DMED) database showing dramatic increases in medical visits for cancers and other conditions, post-jab

For neurological side effects of the shot, four remedies that can be very helpful are fluvoxamine (an antidepressant that blocks cytokine production in neural tissues), pharmaceutical grade methylene blue (improves mitochondrial respiration and repair), near-infrared light (triggers production of melatonin in your mitochondria) and hyperbaric oxygen therapy (boosts mitochondrial function, decreases inflammation and much more)

The COVID jabs also downregulate toll-like receptors 7 and 8, which allows latent viruses such as herpes EBV4 — Epstein-Barr, aka, mononucleosis — to flourish that would otherwise have been kept in check
