

Former Italian PM Berlusconi in Intensive Care. For Two Pathologies Typical of the Covid Vaccines' Serious Adverse Reactions

Description

On the cover image Silvio Berlusconi having the 3rd dose administered in front of a photographer on 20 December 2021 to testify in favor of the Covid vaccines imposed on various professional categories by the Draghi government also supported by his Forza Italia party

"We must avoid new mourning and other lockdowns. Now it's your turn: those who have not yet been vaccinated do it without hesitation as soon as possible, those who can do it book for the third dose" said in December 2021 **Silvio Berlusconi who is now in intensive care after his recovering on Wednesday, 5 April, for two pathologies that are among the most severe damage from mRNA gene sera: leukemia and lung infection.**

Silvio Berlusconi (born 29 September 1936) is an Italian media tycoon and politician who served as Prime Minister of Italy in four governments from 1994 to 1995, 2001 to 2006 and 2008 to 2011. He was a member of the Chamber of Deputies from 1994 to 2013, and has served as a member of the Senate of the Republic since 2022, and previously from March to November 2013, and as a Member of the European Parliament (MEP) since 2019, and previously from 1999 to 2001.

Berlusconi is the controlling shareholder of Mediaset and owned the Italian football club A.C. Milan from 1986 to 2017. He is nicknamed *Il Cavaliere* (The Knight) for his Order of Merit for Labour; he voluntarily resigned from this order in March 2014. In 2018, *Forbes* ranked him as the 190th richest man in the world with a net worth of US\$8 billion. In 2009, *Forbes* ranked him 12th in the list of the World's Most Powerful People due to his domination of Italian politics throughout more than twenty years at the head of the centre-right coalition.

Berlusconi was Prime Minister for nine years in total, making him the longest serving post-war Prime Minister of Italy, and the third longest-serving since Italian unification, after Benito Mussolini and Giovanni Giolitti.

On 1 August 2013, Berlusconi was convicted of tax fraud by the Supreme Court of Cassation. His four-

year prison sentence was confirmed, and he was banned from holding public office for two years. Aged 76, he was exempted from direct imprisonment, and instead served his sentence by doing unpaid community service. In Italy, three years are automatically pardoned; he had been sentenced to a gross imprisonment for more than two years, and the anti-corruption Severino law, which banned him from six-years, expelled him from the Senate.^{[10][11]} Berlusconi pledged to stay leader of Forza Italia throughout his custodial sentence and public office ban.

After his ban ended, Berlusconi ran for and was elected as an MEP at the [2019 European Parliament election](#). He returned to the Senate after winning a seat in the [2022 Italian general election](#). Thus he gave his contribute to the birth of Meloni Government.

It should be noted the good that the leader of Forza Italia and owner of Mediaset has tried to do in an attempt to mediate with the Meloni government and with Parliament for a concrete peace solution for the war in Ukraine.

But he was immediately forced to retract this diplomatic intervention by the parliamentary “hawks” of the Falconer of the Weapons Lobby, namely the former AIAD president Guido Crosetto, current Minister of Defence. That he is well supported for various conflicts of interest also by ministers Giancarlo Giorgetti and Orazio Schillaci, as we revealed in the latest Gospa News investigation.

Pneumonia: A Complication Related to Leukemia

Berlusconi's clinical picture is “complex due to various factors: the pathology in progress, the other pathologies present and the age factor, and this exposes him to the risk of complications”, Claudio Cerchione, hematologist at the Romagna Institute for the Study, told ANSA of Tumors Irccs ‘Dino Amadori’ and president of Soho – Italy (Society of Hematologic Oncology Italy).

Reference is made to chronic myelomonocytic leukemia (CMML): a blood disease that struck the president at the end of March forcing him to an initial hospitalization which was followed, after a brief discharge, by the following one on Wednesday 5 April.

His hospitalization was also necessary for bilateral bacterial pneumonia which is often caused by pneumococcus even if there are viral infections. It is considered a complication related to leukemia as experts explain due to the weakening of the natural immune system.

In pathologies of this type one may run into a “first eventuality – he says – represented by the risk of an infectious complication in an already compromised organism. **Another is that the chronic disease turns into acute: this happens when there is a hyperproliferation of tumor cells which**, at the same time, by invading the bone marrow, prevents the normal production of other crucial cells. These are red blood cells, the lack of which leads to anemia and profound asthenia; white blood cells and neutrophils, the lack of which increases the risk of infection; platelets, the lack of which determines a risk of haemorrhage”.

“Moreover, in some cases in leukemic disease the DNA becomes ‘gets nasty’ – continues the hematologist – leading to mutations in various genes with the effect of further pushing the proliferation of cancer cells. The more these mutations accumulate, the more difficult it becomes for the disease to respond to treatments. However, today innovative experimental therapies are possible

which, through a molecular stratification of the pathology, can allow more targeted treatments”.

Two pathologies reported among the Serious Damages from Covid Vaccines

Given these premises, from a pathological point of view, it seems necessary to point out that they are related to three very serious problems included among the very serious adverse reactions from the Covid vaccines which, by his own admission and testimony, Berlusconi has inoculated himself.

He had the first booster (or 3rd dose) administered on 20 December 2021 using the image in support of propaganda in favor of vaccines vigorously supported by Forza Italia which was the first party to ask for and obtain an extension of the obligation also for school and health personnel.

By now, many medical studies published in the most important international scientific journals report the dangers of DNA alteration, tumor forms, such as leukemia, and pulmonary infections among the most dangerous side effects of messenger RNA gene serums which carry the toxic Spike protein capable of to stay there for months.

To avoid the insinuations of easy speculation on Berlusconi's health, we limit ourselves to quoting the declarations of the experts expunged from these researches where, as did the late French virologist Luc Montagnier but also the vaccination manager of the European Medicines Agency, the unknown and feared damage to the immune system.

“In fact, both cases of new onset and rapid progression of already existing tumors have been published a very short time after the inoculations, but of even greater interest are the works that investigate the possible mechanisms underlying all this,” she wrote in her scientific article by the oncologist Patrizia Gentilini, for decades a specialist and medical director at the hospital of Forlì and today a member of the Scientific Committee of the Fondazione Centro Studi Allineare Sanità e Salute in Milan.

“The immune system has the function of isolating and eliminating cancer cells. If the new boosters continue to do so, we will find ourselves experiencing exponential growth in neoplasms in the coming years. this is truly criminal and we must prevent it at all costs” declared Andrea Stramezzi, surgeon of Milan in a video interview with Gospa News.

Italian Judge asked Investigations on Risks of Tumors Vaccines Injuries and Deaths

The judge of the Court of Florence, Dr. Susanna Zanda, mentioned the research of the Swedish University of Lund on DNA alterations on the “alarming fact that with the RNA of Pfizer Biontech Covid 19 Vaccines a reverse transcriptase occurs, with therefore negative efficacy of vaccines to mRNA, which could imply, if confirmed in vivo, a greater exposure of the vaccinated person to the risk of infections and tumor neoformations”. **She wrote it in a sentence sent to the Rome Public Prosecutor's Office for her to investigate the damage and deaths related to the Covid vaccines.**

“In addition to cancer, which can affect both young and elderly patients, immune-mediated and autoimmune diseases such as diabetes, multiple sclerosis, psoriasis and others can also develop in young people” remarked instead the researcher Loredana Frasca in an explosive research, PhD in immunology and cell biology and group leader for studies on the immunology of autoimmune diseases

at the Istituto Superiore della Sanità (*Health Superior Institute – acronymus ISS*) in Rome.

Just the ISS has expressed to the Ministry of Health the need for a – belated – research on the genotoxicity of mRNA gene serums (from which the carcinogenic potential can derive) due to the fact that “toxicology has not been studied in depth” as candidly admitted by the pharmaceutical company Pfizer for Comirnaty in a confidential document held by the drug regulatory bodies (FDA, EMA and AIFA) and as underlined by the revolutionary research of the Italian biochemist Gabriele Segalla who detected multiple dangerous elements in the nanoparticles that make up this experimental drug .

“However, there is now another reason to halt all vaccine programmes. **As a practicing oncologist I am seeing people with stable disease rapidly progress after being forced to have a booster, usually so they can travel. Even within my own personal contacts I am seeing B cell-based disease after the boosters.** They describe being distinctly unwell a few days to weeks after the booster — one developing leukemia, two work colleagues Non-Hodgkin’s lymphoma, and an old friend who has felt like he has had Long COVID since receiving his booster and who, after getting severe bone pain, has been diagnosed as having multiple metastases from a rare B cell disorder”.

Dr. Angus Dalglish, a professor of oncology at St. George’s University in London, wrote in a study by him.

A research carried out **by Stephanie Seneff, Ph.D.**, senior researcher for over five decades at MIT (Massachusetts Institute of Technology – Cambridge, USA), has instead highlighted the mechanism of damage to the immune system and the consequent autoimmune diseases.

An alarm in this sense was launched by some Chinese researchers of the School of Medicine, Zhejiang University, Hangzhou; Life Sciences Institute and Innovation Center for Cell Signaling Network, Institutes of Biology and Medical Science, Soochow University – Suzhou, and Anhui Anlong Gene Technology Co., Ltd, Hefei.

In October 2020, before the vaccines were placed on the market, they published a study in the prestigious journal Nature in which they highlighted the unknown and high risks of autoimmune diseases especially for the lungs that could have been caused by mRNA gene serums and asked for the immediate suspension of human trials.

They were completely ignored by the scientific community which instead pointed the finger of shame at those who, like Gospa News, hypothesized a correlation between the booster and the resurgence of a tumor pathology in the Bologna football coach Sinisa Mihailovic, who died at the age of 53 in December 2022.

The famous and beloved former soccer was struck down by a flare-up of a leukemia similar to the one for which Berlusconi is now hospitalized.

The former president of the European Parliament David Sassoli, on the other hand, passed away due to a lung infection which immediately made one think of the vaccine he flaunted as an instrument of individual and social health protection. In the light of millions of injured people and thousands of dead, these suspicions of correlations must not be kept silent but must be highlighted and debated as will be done on 16 April 2022 in the North Italy.
