

## German doctor confirms that excess mortality is directly linked to Covid 19 vaccination

### Description

GERMANY: For Dr Reitz there is no doubt: The excess mortality that has been observed since 2021 is largely due to the vaccination against Covid-19. According to their analyses, particular importance is attached to the booster vaccinations. She cannot understand the silence of leading institutions despite the clear data, nor the uncritical behavior of her colleagues. There is also no correct information about the risks of vaccination. Reitz is a specialist in general medicine and psychotherapeutic medicine with her own practice in Hamburg. In a speech at the Monday demonstration in Offenbach on January 31, 2022, she presented the results of her research to the audience.

Since the spring of 2021, since the start of the nationwide Covid vaccinations, people have been dying, according to Reitz literally, like flies, so that millions of deaths have now been recorded worldwide. The doctor differentiated between rapid death within the first fourteen days after the vaccination and a permanently increased chance of early death. In the latter case, the booster vaccinations play an important role.

## Millions of deaths worldwide are attributable to the Covid vaccination

“In Germany we have such an obvious excess mortality rate of 22 percent in December and 20 percent in November. That hasn’t happened since the war. That’s what a big newspaper wrote.” She expressed astonishment that politicians have never shown any interest in the effects of the shots and instead tried to find ways to make them compulsory.

“You die in Germany. You die in England. They die in Europe. They die all over the world. The fact that no one puts their finger on the wound here, from the press, from the government, is the part that actually makes your blood boil. We’ve all seen it before, that a million deaths don’t interest us. There are millions dead, there are millions dead. Worldwide.”

Reitz pointed out that “very hard data from young people in England” showed that people under 60 have an excess mortality rate of 100 percent. “Hundred percent more chance of dying if you get shots

than if you don't get shots and then get some virus or whatever."

In Germany there have been around 12 000 to 13 000 deaths per month from vaccinations with numbers rising from booster shots.

"We had ten percent in October. That was way, way, way too much. And we have institutes that are incredibly well paid, such as the Paul Ehrlich Institute and the RKI, which are supposed to be the guardians of our health and should also be able to recognize epidemiological emergencies. All these institutions have this data. Since June, they have seen that we have an inexplicable excess mortality rate that can only be explained by the vaccinations. And what are they all doing? They're certainly not sounding the alarm."

She accused Karl Lauterbach, the German Minister of Health of being "absolutely irresponsible". Reitz added that three-quarters of excess mortality was due to vaccination.

"It's not just an allergic shock that can occur. Instead, it has been [proven](#) – these were [American](#) cardiologists, cardiac doctors – that the vessels and organs are inflamed and therefore the [probability of developing a serious heart disease](#) increases by 120 percent. Not by 20 percent, but by 120 percent."

## Cancers are rife after Covid vaccination

"It has been proven by a study from Sweden, by Bansal and others, who examined people who had died after vaccination and found up to four months later that the spike proteins, which should actually have been excreted by now, still sit in the cells in the body, in the organs and cause inflammation there. The pathologists in Reutlingen have confirmed the same thing. They also said we see white blood cells everywhere in the organs that don't belong there. That's inflammation. That's why these people died and they could only associate it with the vaccinations," Reitz explained.

Further studies from Sweden revealed that the human repair mechanisms in the cells become permanently damaged by the vaccinations. "That explains why so many cancers explode when people have been vaccinated. This explains why many illnesses that seemed to have been alleviated reappear," said Reitz.

"We've had a 50 percent increase in probability, an increased number of heart attacks and strokes in emergency hospital admissions since April. That's what the figures from the RKI say. These are all official data that I bring, these are all studies that exist. They explain why so many people are dying and have died."

## Booster vaccination increases risk of death

"Well, it's been proven that vaccines are to blame for at least 12 000 deaths a month since November and December. And each booster increases the risk of dying."

Those who took the jab have fifteen years less to live on average. "So if I were to enlighten someone about vaccination, I would have to say, listen, your risk of dying early from the vaccination, of dying fifteen years earlier, is statistically proven. And the risks of dying from the Corona disease are

significantly lower. Would you like to be vaccinated? This information is not communicated anywhere at all. And certainly not for children.”
