

German Health Insurer Reveals ‘Alarming’ Underreporting Of Vaccine Side-Effects

Description

GERMANY: A large German health insurance provider revealed on Wednesday that **Covid-19 vaccine side-effects are vastly underreported**, according to [Welt](#).

After [analyzing data](#) from over 10 million individuals, BKK ProVita board member Andreas Schöfbeck, over a 7.5 month period beginning in early 2021, **216,695 policyholders out of 10.9 million** were treated for vaccine side-effects. This compares to **244,576 reports out of 61.4 million** reported by the Paul Ehrlich Institute – a German federal agency.

Germany has a population of around 83 million people.

Schöfbeck called the data an “alarm signal,” adding “The numbers determined are significant and urgently need to be checked for plausibility.”

“The data available to our company gives us reason to believe that there is a very considerable under-recording of suspected cases of vaccination side-effects after they received the [COVID-19] vaccine.”

“If these figures are applied to the year as a whole and to” the entire population of Germany, Schöfbeck estimated, then **“probably 2.5-3 million people in Germany been under medical treatment because of vaccination side effects after [COVID-19] vaccination.”**

As Jack Phillips of [The Epoch Times](#) notes:

Schöfbeck concluded that based on their data, **“there is a significant underreporting of vaccination side-effects”** in Germany.

Another letter that was sent out by [BKK \(pdf\)](#) suggested that vaccination side effects reported across Germany are at least 10 times more common than what was reported by the Paul-Ehrlich Institute, [reported](#) the Nordkurier newspaper on Wednesday.

Schöffbeck's letters were also sent to Germany's Standing Vaccination Commission and the German Medical Association.

The letters did not elaborate on the severity of the side effects, nor did they provide a breakdown of the symptoms, or which vaccines caused the side effects. Germany's drug regulator has [approved](#) COVID-19 vaccines manufactured by Pfizer, AstraZeneca, Johnson & Johnson, NovaVax, and Moderna.

Federal health officials in the United States and Germany have stressed that COVID-19 vaccines' benefits outweigh the potential risks.

And the Paul Ehrlich Institute, the German federal health agency that regulates vaccines and medicines, asserts on its website that COVID-19 vaccine side effects are very rare. They list myocarditis, the inflammation of the heart muscle; and pericarditis, the inflammation of the pericardium, as rare side effects associated with COVID-19 vaccines.

* * *

This German Insurance company called out the public data as too low & mentioned ethics...this provides cover for others in the insurance industry to follow suit & they will. The tsunami of news flow will be uncontrollable for the propagandists.
