

Glenn Beck: “ESG” Is Actually a “Social Credit Score”

Description

Glenn Beck has devoted himself to dissecting everything about “The Great Reset.”

If you’re one of those people hearing a lot about this, but still not knowing what it means – here’s a quick intro.

The Great Reset is the name of the 50th annual meeting of the World Economic Forum, held in June 2020. It brought together high-profile business and political leaders, convened by Charles, Prince of Wales, and the WEF, with the theme of rebuilding society and the economy following the COVID-19 pandemic.

Beck has delved into deep waters, and explained how banks and other financial institutions will play a huge role in the “Great Reset.”

We can already see that happened, with people being financially de-platformed by banks for not “thinking” the right way.

But now, Glenn is looking at “ESG,” which stands for “Energy Social Justice, Governance.”

Now, he warns it’s actually a social credit score.

How?

Well, investors are increasingly applying these non-financial ESG factors as part of their analysis process to identify material risks and growth opportunities.

According to various media outlets, this social credit system evaluates citizen trustworthiness based on a complex combination of personal data, like demographics, online and offline behaviors, and social networks.
