

How Cancer Deaths From the COVID Jabs Are Being Hidden

Description

Story at-a-glance

- Analysis of U.S. Morbidity and Mortality Weekly Report (MMWR) data suggests the U.S. Centers for Disease Control and Prevention has been filtering and redesignating cancer deaths as COVID deaths since April 2021 to eliminate the cancer signal
- The signal is being hidden by swapping the underlying cause of death with main cause of death
- Uncontrollable turbo-charged cancers the medical establishment had never seen before only started to occur after the rollout of the COVID jabs
- Before it was manipulated to eliminate the safety signal, data from the Defense Medical Epidemiology Database (DMED) showed cancer rates among military personnel and their families tripled after the rollout of the shots
- After the rollout of the COVID jabs in 2021, cancer patients have gotten younger, with the largest increase occurring among 30- to 50-year-olds, tumor sizes are dramatically larger, multiple tumors in multiple organs are becoming more common, and recurrence and metastasis are increasing

In a series of Twitter posts, The Ethical Skeptic — self-described as a former intelligence officer and strategist — has laid out a series of charts illustrating how cancer deaths are being mislabeled as COVID deaths.

The suspicion is that this is an effort to hide the fact that the COVID shots have resulted in soaring cancer rates. The Ethical Skeptic also takes a deep dive into the data in “Houston, We Have a Problem, Part 1,” on TheEthicalSkeptic.com.¹

As noted in his article, seven out of the 11 International Classification of Diseases (ICD) codes tracked by the U.S. National Center for Health Statistics — including cancer — saw sharp upticks starting in the first week of April 2021.

“This date of inception is no coincidence, in that it also happens to coincide with a key inflection point

regarding a specific body-system intervention in most of the U.S. population,” The Ethical Skeptic notes.² In other words, April 2021 was when large swaths of the American population were getting their first COVID jabs.

Cancer Diagnoses on the Rise

The following graph, highlighted on Dr. Jennifer Brown’s Substack,³ illustrates the cyclical wave pattern of cancer diagnoses, from January 2015 and October 1, 2022. As noted in the top-right text box:

“We should be at or near a seasonal nadir. Instead we are at an all-time CA [cancer] excess, and heading up. Keep in mind there is substantial lag to CA reporting, so this likely under-represents true excess.”

At no point during the past seven years have we seen this rate of new cancer diagnoses. Are the COVID shots to blame? Probably, unless we can identify another widespread environmental factor or exposure that was introduced to the population, en masse, in early 2021, that didn’t exist before.
