

Ivy League Brown University **REQUIRES** Covid jabs plus boosters, even as enrolled students are suffering **DEADLY** side effects from them, including myopericarditis

Description

Myopericarditis is inflammation of the sac-like tissue that surrounds the heart. Considered a “complication” of acute pericarditis, myopericarditis can be fatal, especially if the condition worsens after non-responsiveness to treatment. Most folks only survive with myopericarditis for 3 to 5 years, and annually, there are over 32,000 deaths globally from myopericarditis.

Recently, at least one Brown University student suffered myopericarditis after being force-vaccinated for COVID-19 (thanks to the University’s mandatory multi-vaccine policy). Still, the Ivy League medical-fascists are enforcing their medically illegal rule that all students and faculty be force-injected with billions of spike-prions that clog the blood, causing severe, acute inflammation to the heart sac and heart muscle.

Risk of myocarditis and myopericarditis from COVID-19 vaccines much worse than risk of catching the virus, especially for healthy students

Informed choice no longer exists in certain pockets of America, when it comes to medical “procedures” and experiments. Dangerous, lab-concocted experiments are force-injected into healthy humans who simply want to attend school or continue to work at their job. Universities and hospitals alike are continuing to force-vaccinate Americans by threatening to expel or fire them if they don’t succumb to the deadly “clot shots” recommended by the [highly corrupt CDC](#), also known as the “Center for Disease Continuation.”

Most COVID jab recipients are ill-informed (pun intended) of the serious, severe side effects that are so commonplace from these China Flu stabs, that either contain billions of sticky prions or change your DNA (mRNA) to produce them by the billions, indefinitely. College athlete's sports careers are ending abruptly after being "vaccinated" with prions that cause the heart muscle and sack to inflame, acutely.

Many athletes have heart attacks on the playing fields and courts, shortly after being force-vaccinated with these spike proteins that mimic the Wuhan Flu virus, causing major body systems to go into fight or flight mode, permanently.

Institutes of higher education, like Brown University, know for a fact that young males are more prone to suffering these heart conditions from the COVID jabs, but they still insist every student and faculty member get jabbed with not only the initial clot shots, but boosters regularly, as well. This is nothing short of a death sentence for thousands of healthy students and young adults, but the mass media, social media, CDC, FDA and Biden Regime are covering up all the clot shot carnage.

Brown University mass-injection mandate remains in place, though students are facing heart damage and death from the side effects

Ivy League gurus are still somehow controlling state policy in Rhode Island, enforcing deadly COVID-19 jabs while determining what is "acceptable discourse" regarding vaccine-induced injuries. This will continue, somehow, for the 2022/23 academic year, even though the pandemic is waning quickly, and the vaccines have NEVER been proven to prevent COVID-19 contraction, transmission, bad cases or death. Conversely, the jabs are now proving to be quite dangerous, especially to the hearts of healthy students, teens and children.

A research physician and epidemiologist at Brown University Center for Primary Care, Dr. Bostom, was the first to blow the whistle on students there suffering serious heart injuries from the COVID jabs they were forced to get against their will. The first student, a hospital volunteer, came forward basically by confession, at the Miriam Hospital on campus on March 22, of 2021. He had symptoms of myopericarditis, and Dr. Bostom figured out it came from the clot shot he was forced to get in order to keep his job and to continue attending the ivy league university.

The student's injuries are also listed in VAERS, the vaccine adverse event reporting system, and this is just one of thousands of these type of vaccine-induced injuries and cases involving previously-healthy college students across the country.

One thing is for sure; if you die from a heart attack caused by the COVID-19 vaccines, there is ZERO chance you will catch COVID after you're dead, so in that regard, the vaccines are "effective."
