

New Hampshire House Passed Bill Making Ivermectin Available At Pharmacies!

Description

New Hampshire lawmakers proposed HB 1022, which permits the pharmacist to have ivermectin by means of a standing order.

By a vote of 183-159, HB 1022 passed in the New Hampshire House.

The legislation moved to the NH State Senate.

We will share new updates when available.

We will share new updates when available.

You will hear the truth about Ivermectin, only facts!

Two separate doctors claim that more than 100 Congress members were treated with Ivermectin. Someone sent this to me, where it is explained what this medicament really is. The source would remain anonymous.

Take a look at the video on Rumble:

We aren't doctors, and we won't share with you medical advice. I am a reporter, reporting what other people stated.

Now, we're going to share with you one video of a woman who documented her C-19 journey and

treatment with Ivermectin. It wasn't very long because she recovered very fast.

Take a look at the video below:

We don't want the MSM to share more misinformation about C-19 and Ivermectin. We will share the results of the research that MSM doesn't want to release.

You have to know that MSM shares lines. They share that Ivermectin is for animal/ horses use only.

The problem is that it is approved for humans:

“Ivermectin has been FDA approved for human use since 1996.”

[Politifact](#) tried to say that the actual statement is a little bit fake.

This post was flagged as part of Facebook's efforts to combat false news and misinformation on its News Feed. (Read more about our partnership with Facebook.)

It is true that ivermectin was approved by the Food and Drug Administration that year — but not to treat the coronavirus. The drug was approved for strongyloidiasis, a disease caused by a roundworm, and

onchocerciasis, or river blindness, which is caused by a parasitic worm.

The drug was approved for humans under the brand name Stromectol, National Geographic reported, and since then it's been recognized as a safe treatment for several tropical diseases caused by parasites. In 2015, two scientists even won a Nobel Prize for their discovery of ivermectin and its use to treat diseases caused by parasites.

But unlike, say, river blindness, COVID-19 is caused by a coronavirus, not by parasites. And as PolitiFact recently reported in a story exploring ivermectin, there's no conclusive evidence that ivermectin is effective against COVID-19.

Sharing lies is what makes me angry! If you give me one year, I will share all the twists and turns that the MSM takes to transform the truth into a lie!

[WIV Channel 4 News](#) reported:

After a recent resurgence in several states, health officials are warning residents to be aware of a dangerous of an unauthorized "treatment" for COVID-19 — often being taken with dangerous consequences.

It's called ivermectin and it's used to treat and prevent parasites in animals, the Food and Drug Administration explains. The tablets are not FDA approved for treatment of COVID-19 in humans and isn't even an anti-viral drug — meaning it has no impact on the coronavirus. And because the large-concentration tablets are intended for large animals, these can be treacherous for humans.

In addition to not being authorized for treatment, there's no evidence ivermectin treats COVID-19.

"There's a lot of misinformation around, and you may have heard that it's okay to take large doses of ivermectin. That is wrong."

FDA

The FDA and several state officials say they've seen an uptick in calamitous use of the drugs, particularly tablets used to treat parasitic worms in horses. While ivermectin is approved for humans to treat certain skin conditions (rosacea) and certain external parasites like head lice, the FDA warns this ivermectin is different than the one used in animals.

On Friday, the Mississippi Department of Health was forced to send out a warning to residents about the dangers of the drug after several poisonings.

The Mississippi Poison Control Center said at least 70% of recent ivermectin-related calls are tied to people taking livestock or animal formulations they bought a livestock supply stores or through online markets.

Eighty-five percent of callers had mild symptoms — these include rash, nausea, vomiting, and abdominal pain — but one person needed evaluation because of how much they'd taken.

More severe dangers of ivermectin ingestion include neurologic disorders, seizures, coma and death.

Use of ivermectin should only be taken if prescribed by a doctor for an FDA-approved use. Regardless of the usage and prescription, the FDA warns ivermectin overdose is still possible. Possible interaction with other medications is also a possibility.

There's a 70% surge in Ivermectin poison Center calls sounds, and that's a lot!

[NPR](#) reported a 145% surge. It's just too much!

According to the National Poison Data System (NPDS), which collects information from the nation's 55 poison control centers, there was a [245% jump](#) in reported exposure cases from July to August — from 133 to 459.

Out of 333 million people, there were 459 calls to poison centers, 0, 00000137%.

85% of the people called had mild symptoms like a rash.

We will continue sharing the truth about this!

Ivermectin was on the list of the best drugs of the WHO.

[INCHEM.org](#) reported:

They lay it out in black and white and even a non-medical person like me can understand it.

Now let's go down to Section 7.2 of their report which is about Toxicity in Humans:

7.2 Toxicity

7.2.1 Human data

7.2.1.1 Adults

Amounts approaching the therapeutic doses in animals (100 to 200 μ g/kg bodyweight) are not hazardous to humans. Ingestions of large quantities (10 to 100 times the animal therapeutic dosage) may produce symptoms resembling those observed in animal toxicology studies at high toxic levels.

An adult female accidentally self-injected a small quantity (approximately 200 μ g/kg) subcutaneously. Twelve hours later she experienced colicky pain with nausea but recovered within 12 hours (MSD, 1988).

Clinical studies of oral ivermectin given in doses from 2 to 200 μ g/kg (maximum 12 mg) have shown a pattern of adverse experiences that included only one serious event (transient stupor). The remaining adverse experiences were considered not serious and were chiefly of the type expected based on the characteristics of the underlying disease and the responses seen after treatment with other microfilaricidal drugs, except for reports of "depression" (not psychiatrically tested) in four patients in open studies (MSD, 1988).

7.2.1.2 Children

A 16-month-old boy weighing 15 kg ingested approximately 100 to 130 mg of ivermectin (as an injectable solution). Ten hours post-ingestion he had mydriasis in one pupil, with frequent vomiting, pallor, 35°C temperature, tachycardia, somnolence and variable blood pressure. He developed urticaria the following day, and had recovered after three days (MSD, 1988).

I'm going to bold the key part:

7.2 Toxicity

7.2.1 Human data

7.2.1.1 Adults

**Amounts approaching the therapeutic doses in
animals (100 to 200 μ g/kg bodyweight) are not**

hazardous to humans. Ingestions of large quantities (10 to 100 times the animal therapeutic dosage) may produce symptoms resembling those observed in animal toxicology studies at high toxic levels.

An adult female accidentally self-injected a small quantity (approximately 200 μ g/kg) subcutaneously. Twelve hours later she experienced colicky pain with nausea but recovered within 12 hours (MSD, 1988).

Clinical studies of oral ivermectin given in doses from 2 to 200 μ g/kg (maximum 12 mg) have shown a pattern of adverse experiences that included only one serious event (transient stupor). The remaining adverse experiences were considered not serious and were chiefly of the type expected based on the characteristics of the underlying disease and the responses seen after treatment with other microfilaricidal drugs, except for reports of "depression" (not psychiatrically tested) in four patients in open studies (MSD, 1988).

7.2.1.2 Children

A 16-month-old boy weighing 15 kg ingested approximately 100 to 130 mg of ivermectin (as an injectable solution). Ten hours post-ingestion he had mydriasis in one pupil, with frequent vomiting, pallor, 35°C temperature, tachycardia, somnolence and variable blood pressure. He developed urticaria the following day, and had recovered after three days (MSD, 1988).

Even if people take the animal dosage, it isn't harmful to the people.

The MSM and the officials censor this info because it actually works. It treats Covid-19.

The most commonly asked question is how people can recover their health from the taken vaccine. Some doctors elaborated it, and now they have the answer.

Bear in mind that we are reporters, and we report what other people say. Dr. Judy Mikovits attended the StewPeters Show, and it's the best one I have seen so far.

She is among the few doctors we can trust, and the rest of them are dr. Tenpenny and American's Frontline Doctors.

IN this interview, Dr. Mikovits discussed the most critical topics and shared why her policy is No VaxNo Mask.

Later, the doctor added that we have to know how to protect ourselves from the vaxxers who are shedding, and if you have already taken the vax but regret it, you will find how to regain your health.

People love this interview.

Watch the video below on [Rumble](#)

America's Frontline Doctors!

Big Media, Tech, Business, and Pharma, are the liars who want us all dead! Covid-19 repair and prevention protocols were shared on America's Frontline Doctors.

THE ZELENSKO COVID19 PROTOCOL Dr. Vladimir Zelenko

Endorsed by... 

ZINC KILLS VIRUS	HCO ALTERNATIVES	HAVE ON HAND
ZINC CAN'T GET INTO CELLS	QUERCETIN	QUERCETIN 500mg
HCO OPENS THE CELL DOOR FOR ZINC	E.G.C.G. (ERGALLOTECHIN GALLATE)	VITAMIN C
		VITAMIN D
		ZINC

HCQ is prescription based only. Dr. Zelenko recommends Quercetin as an over-the-counter alternative. It is a plant derivative that does essentially the same thing as HCQ and is readily available. Quercetin, like HCQ, is a zinc ionophore which allows a rapid increase in intracellular zinc levels. It also enhances vitamin transportation to the cells. Vitamin C is a required cofactor for Quercetin to work. Vitamin D helps our immune systems stay balanced.

This chart simplifies & summarizes Zelenko's COVID19 protocols with the Quercetin alternative.

Prophylaxis (> 45 yrs old)	Treatment - high risk (> 45 yrs old)
Vitamin D3 5000IU 125mg, daily	Vitamin D3 10000IU 250mg, 7 days
Vitamin C 1000mg, daily	Vitamin C 1000mg, 7 days
Zinc 25-50mg, daily	Zinc 50-100mg, 7 days
HCQ 200mg, 5 days, then 200-400mg weekly or Quercetin 500mg, daily	HCQ 200mg, 2x daily 5-7 days or Quercetin 500mg, 3x daily for 7 days Azithromycin 500mg, 5 days

   

Quercetin	\$33.87	6 months
Vitamin C	\$7.68	3+ months
Vitamin D3	\$19.99	1+ year
Zinc	\$4.58	3+ months

In addition, you will find the Wellness Protocol looking normal to me.

Wellness Protocol

Dr. Teryn Clark@MdTeryn

THIS IS NOT MEDICAL ADVICE. Every situation is unique and every person must check with his or her own physician, especially if you are taking any other medication.

Age >15

Quercetin 500 mg. twice daily, Zinc 50 mg daily, Vitamin D 2000 Iu daily, Melatonin 3-6 mg. nightly (exclude if <25)

Age < 15

Elderberry and Zinc gummies

Next, they shared very reasonable Treatment options. You have to consult your doctor for 100% responsibility and assurance.

Treatment Options

Low-risk patient

1. Rest, oral fluids, Tylenol as needed
2. Vitamin C 1 gm once a day for 7 days
3. Quercetin 500 mg. twice a day for 7 days
4. Elemental Zinc 50 mg. once a day for 7 days
5. Close follow up with a doctor

High-risk patient

1. Rest, oral fluids
2. Tylenol as needed
3. Elemental Zinc 50 mg. once a day for 7 days
4. Hydroxychloroquine (HCQ) 200 mg twice a day for 5 to 7 days
5. Azithromycin 500 mg. once a day for 5 days or doxycycline 100 mg twice a day for 5 to 7 days

Note if HCQ is inaccessible then use Quercetin 500 mg. three times a day in place of HCQ. If HCQ becomes accessible, then switch to HCQ.

Additional treatment options. Should be custom tailored for every patient.

1. Ivermectin 6 mg. twice a day for 1 day
2. Budesonide 1 mg/2cc solution via nebulizer twice a day for 7 days
3. Dexamethasone 6 mg. once a day for 5 to 7 days
4. Blood thinners (i.e. Eliquis or Xarelto)
5. Home O2
6. Home IV fluids

Take a look at the diagram.

Zelenko Protocol (> 45 yrs old)

ZELENKO COVID19 PROTOCOL (moderate/high risk, > 45 yrs old)			
Items in orange are available OTC, others are prescription			
Prophylaxis			Treatment
1000mg, daily	Vitamin C	same	1000mg, 7 days
5000IU 125mcg, daily	Vitamin D3	double	10000IU 250mcg, 7 days OR 50000IU, 1-2 days
25mg, daily	Elemental Zinc	double	50mg, 7 days
Zinc Ionophore			
500mg, daily	Quercetin	double	500mg, 2x - 7 days
OR		-	OR
400mg, daily	Epigallocatechin-gallate (EGCG)	same	400mg, 1x - 7 days
OR		-	OR
200mg, 5 days, 200-400mg weekly	Hydroxychloroquine (HCQ)	double	200mg, 2x - 5-7 days
OR		-	AND/OR
0.2mg/kg, day 1 & 3, weekly	Ivermectin (IVM)*	double	0.4-0.5mg/kg, 5-7 days
*Example: IVM dosage for 200lb person (90kg) - Prophylaxis 18mg, Treatment 36mg-45mg			
Antibiotic			
---	Azithromycin (Z-PAK)	add	500mg, 1x - 5 days
---	Doxycycline	add	OR 100mg, 2x - 7 days
Other Treatment Options			
corticosteroid	Dexamethasone 6-12mg 1 time a day for 7 days or		
corticosteroid	Prednisone 20mg twice a day for 7 days, taper as needed		
corticosteroid	Budesonide 1mg/2cc solution via nebulizer twice a day for 7 days		
blood thinners	Blood thinners (i.e. Lovenox, Eliquis, Xarelto, Pradaxa, Aspirin)		
anti-inflammatory	Colchicine 0.6mg 2-3 times a day for 5-7 days		
	Monoclonal antibodies		
	Home IV fluids and oxygen		

I will share everything again once they share some new information on their website.

If you want to know where you can buy all these things, we have given you the links to the best places in this article. Furthermore, you have to hear what Chris Burres discussed about the powerful C60. He isn't saying that C60 cures or treats COVID. Chris said that it would improve your immune system, and you will benefit a lot precisely from this vitamin.

We consume C60, and we are delighted. Once you start taking your dose, you will see the benefits. First, let me give you my disclaimer once again in bold font: I'm not a doctor, and I'm not giving you

medical advice. I'm not telling you this is going to treat or cure any condition you have. I'm just telling you what I have personally experienced.

C60 represents a powerful antioxidant, commonly referred to as a perfect carbon molecule. It is approximately more powerful than Vitamin C, 172x.

As a vitamin, C60 is an antioxidant, antiviral, anti-inflammatory, and anti-bacterial.
Carbon 60 – perfect carbon molecule.

Many companies produce carbon which is toxic and destructive for your organism, and we did research. Now, we have the best company, with the highest standards and safest, continually-tested products. It is C60 Evo.

Chris Burres had another interview which answered our questions. Just an excellent discussion. From there, we can learn what C60 is, how its inventor won a Nobel Prize, and how it benefits people.

Take a look at the video on Rumble.

We have a YouTube backup.

Clif High has the oldest immune-boosting plan. Since the beginning of the pandemic, Clif High has been promoting C60 as the best immunity booster.

See below:

We have a screenshot:

What do i do if i am vaccinated already??

The best thinking available at this moment:

NAC (an amino acid) for cellular repair.

C60 for apoptosis to get rid of damaged cells & repair mitochondria.

Ivermectin (12mg dose for regular adult, body weight is a factor for dose, see package)

Glutathione to flush out grapheme oxide & SPIONS.

vitamin D (crucial) minimum 10,000 IU daily (15,000 IU in winter) probably daily rest of life. - immune system support.

vitamin C (intracellular 'cement' repair & other uses) minimum 3 gms daily liposomal.

Chaga tea daily (couple of cups should suffice - 1/4 tsp chaga powder to 8 oz hot water - ok to drink the chaga powder in the mix).

Balanced Zinc (15 zn to 1 cu) Amazon to locate by that label. Protects against covid & will degrade spike proteins & SPIONS.

We aren't doctors, but I bet you don't believe Dr. like Fauci, Birxx, who can't stop lying to promote the vaccine and get more money.

We already noted that we are reporters, and we report what others say.

Clif High has the best remedy for C-19, and that is large doses of vitamin Vitamin D, Chaga Mushroom Tea, C60, and of course, hydroxychloroquine and ivermectin may be highly effective!

Take a look at the video below:

Cliff explains the harmful effect that spike protein has on our body and discusses the C60 power and why you should consume it.

You need large doses of the right kind of Vitamin C, 10-15,000 IU's of Vitamin D to maintain certain blood levels, and then Clif recommends C60 too.

Watch the video on [Rumble](#):

C60 is a powerful vitamin, and below you can read the reports about it.

- C60 can slow down aging and reduce cellular damage.
- C60 can improve the immune system and reduce inflammation naturally.
- People have reported substantial weight loss after taking C60 for more than a year, when they have a healthy lifestyle.
- Often we hear about improved vision and substantially keener mental focus; our most consistent response!
- Racers, runners and hikers have discovered the advantage of more endurance, power, and strength on C60.
- We often hear stories about people feeling more virile and romantic while taking our formulation!
