

NHS reveals in FOI that Ambulance Call-Outs for Heart Illness have DOUBLED since Covid-19 Vaccination began among all age-groups

# Description

USA: The National Health Service has confirmed in response to a freedom of information request that ambulance call-outs relating to immediate care required for a debilitating condition affecting the heart nearly doubled in the whole of 2021 and are still on the rise further in 2022. But the most concerning published figures show that they have also doubled among people under the age of 30.

On the 25th April 2022, Duncan Husband sent a Freedom of Information (FOI) request to the West Midlands Ambulance Service University NHS Foundation trust requesting to know the following –

'Can you please tell me, under the Freedom Of Information Act,

The amount of call outs for patients with heart conditions per year, between 1st January 2017 and present day?

The amount of call outs for patients with strokes per year, between 1st January 2017 and present day?

If possible, can you also give me the total number of the above patients who were under 30. Can you give me the monthly stats for each year please?'

Duncan Husband 24 April 2022	Oelivered									
Dear West Midlands Ambulance Service University NHS Foundation Trust,										
Can you please tell me, under the Freedom Of Information Act,										
The amount of call outs for patients with heart conditions per year, between 1st present day?	January 2017 and									
The amount of call outs for patients with strokes per year, between 1st January 2017 and present day?										
If possible, can you also give me the total number of the above patients who we	re under 30.									
Can you give me the monthly stats for each year please?										
Yours faithfully,										
Duncan Husband

Dear Duncan Husband.

### REQUEST UNDER THE FREEDOM OF INFORMATION ACT 2000

Further to your enquiry, which we received on 25 April 2022, you requested the following information:

Can you please tell me, under the Freedom Of Information Act,

The amount of call outs for patients with heart conditions per year, between 1st January 2017 and present day? The amount of call outs for patients with strokes per year, between 1st January 2017 and present day?

If possible, can you also give me the total number of the above patients who were under 30.

Can you give me the monthly stats for each year please?

#### Response

Please find attached a spreadsheet containing the information you have requested.

If you are dissatisfied with our response, you have the right to appeal in line with guidance from the Information Commissioner:

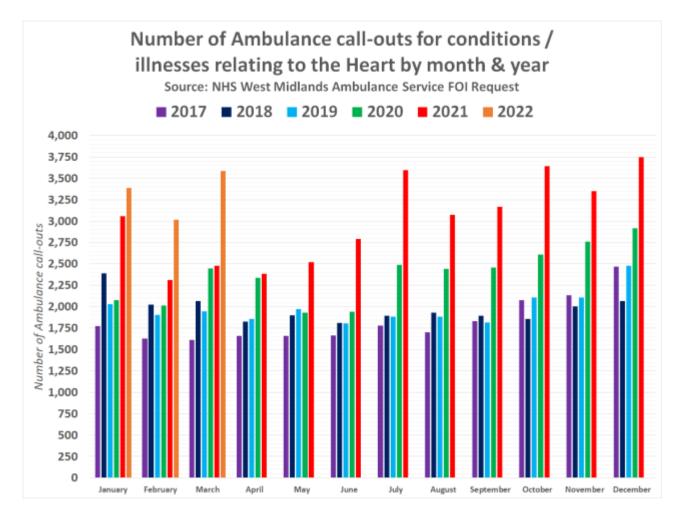

In the first instance you may write to the Chief Executive Officer of this Trust

 Anthony Marsh Regional Headquarters Millennium Point Waterfront Way Brierley Hill West Midlands DY5 1LX Tel: 01384 215555

The following table is the one provided by the NHS for the number of overall ambulance call-outs for heart conditions by month and year –

"Heart"						-						
Calendar	January	February	March	April	May	June	ylut	August	September	October	November	December
Year/Month												
2017	1,775	1,627	1,611	1,661	1,658	1,663	1,779	1,703	1,829	2,078	2,134	2,469
2018	2,391	2,024	2,067	1,824	1,901	1,809	1,893	1,928	1,892	1,858	2,006	2,067
2019	2,031	1,903	1,945	1,855	1,972	1,804	1,886	1,885	1,817	2,106	2,110	2,477
2020	2,077	2,016	2,448	2,336	1,928	1,942	2,488	2,441	2,456	2,609	2,758	2,915
2021	3,056	2,314	2,481	2,384	2,518	2,791	3,593	3,071	3,165	3,640	3,349	3,747
2022	3,388	3,015	3,587									

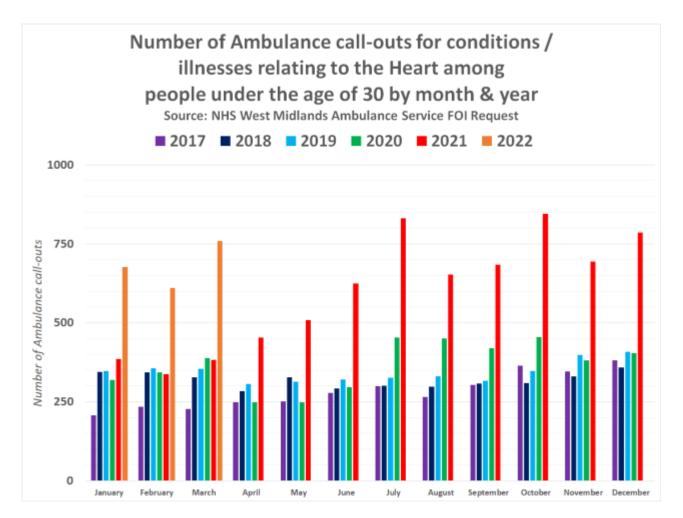

The following chart visualised the data in the table above -

The following table is the one provided by the NHS for the number of ambulance call-outs for heart conditions among people under the age of 30 by month and year –

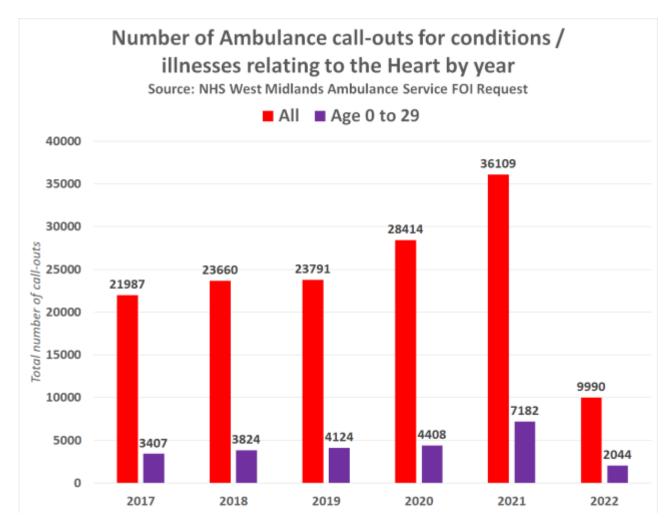

"Heart, under 30"												
Calendar	January Feb	February	March	April	May	June	July	August	September	October	November	December
Year/Month												
2017	207	235	228	248	251	278	300	265	303	365	346	381
2018	345	343	327	284	327	293	301	298	308	309	330	359
2019	348	356	354	306	313	320	326	331	317	347	398	408
2020	319	343	389	248	248	297	453	451	420	455	381	404
2021	385	337	383	453	509	624	831	652	683	845	694	786
2022	676	610	758									

The following chart visualised the data in the table above -

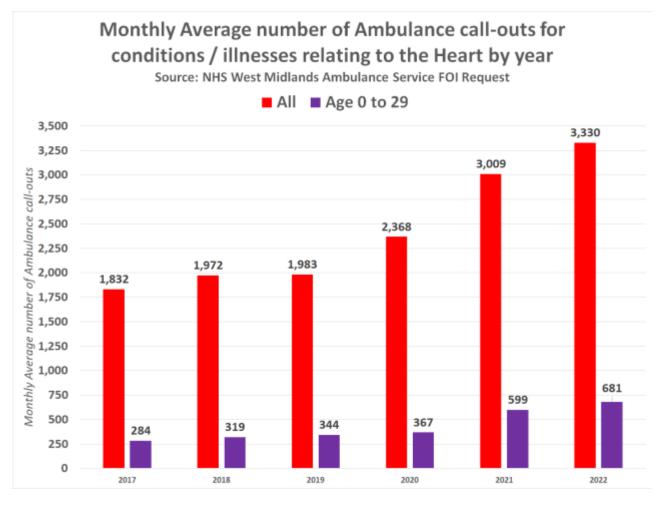

As we can see from the above two charts, ambulance call-ours for high conditions have been higher overall since January 2021, and have been increasing month on month. It was not until April 2021 that we saw a significant increase among people under the age of 30 though, and it again has increased month on month since then.

The following chart shows the overall total call-outs by year for everyone and those aged 0 to 29 -

The average number of annual call outs between 2017 and 2020 equates to 24,463. Meaning the number of call-outs increased by 48% in 2021. The average number of annual call-outs among under 30's between 2017 and 2020 equates to 3,940. Meaning the number of call-outs increased by 82% in 2021.

The following chart shows the monthly average number of ambulance call-outs for conditions relating to the heart by year –

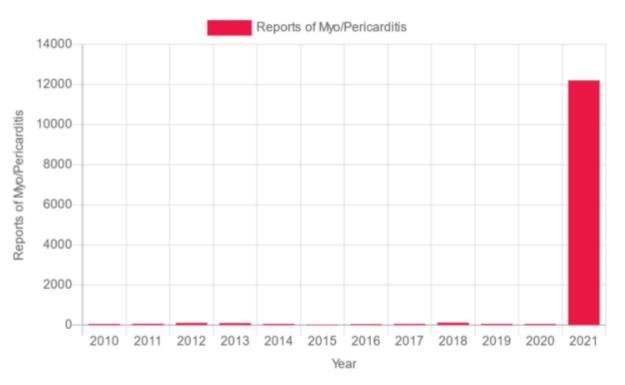

There was a significant increase in 2021 among all age groups, and unfortunately, things have got even worse in the first few months of 2022.

The question is, why

We really don't need to look any further than the number of cases of myocarditis caused by Covid-19 vaccination. Myocarditis is a condition that causes inflammation of the heart muscle and reduces the heart's ability to pump blood and can cause rapid or abnormal heart rhythms.

Eventually, myocarditis weakens the heart so that the rest of the body doesn't get enough blood. Clots can then form in the heart, leading to a stroke or heart attack. Other complications of the condition include sudden cardiac death. There is no mild version of myocarditis, it is extremely serious due to the fact that the heart muscle is incapable of regenerating. Therefore, one the damage is done there is no rewinding the clock.

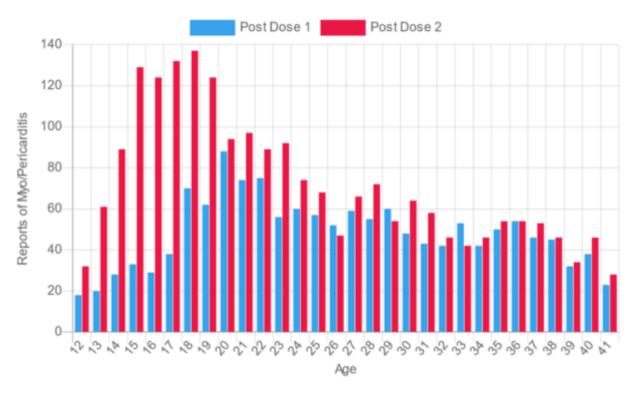

The following chart shows reports of myocarditis to the U.S. Centers for Disease Control's Vaccine Adverse Event Reporting System by year –

All Myo/Pericarditis Reported to VAERS by Year (all vaccines)

Heart damage is ubiquitous throughout the vaccinated population, and the damage is being diagnosed in multiple ways. Acute cardiac failure rates are now 475 times the normal baseline rate in VAERS. Tachycardia rates are 7,973 times the baseline rate. Acute myocardial infarction is 412 times the baseline rate. The rates of internal haemorrhage, peripheral artery thrombosis, coronary artery occlusion are all over 300 times the baseline rate.

Fully vaccinated people are suffering like never before.

All Myo/Pericarditis Reported to VAERS Post COVID Vaccine by Dose

Covid-19 vaccination was supposed to ease pressure on the NHS, not apply more.
