

## Pfizer Added Differing Amounts of Active Ingredient to Batches of COVID Vaccine [VIDEO]

### Description

**ER Editor:** In the 5-minute video below, **Dr. Naomi Wolf** (not a medical doctor) reveals she received a leaked document, called **Appendix Q put out by the AMA**:

- This is an information sheet about the Pfizer vaccines, with a table on it, that is **given to doctors only, not nurses**. Nurses and pharmacists had previously complained that there was no vaccine information as there usually is on the package insert sheets. These tables show the **quantities of active ingredient in each vaccine**, which has its own **unique code or serial number**.
- The sheet in her possession has around 8 or 9 vaccine codes / serial numbers, which show **different levels of the active ingredient (spike protein and/or lipid nanoparticle?)**, ranging anywhere from **3 (three) micrograms to 100 (a hundred) micrograms**.
- She refers to the large spike in millennial deaths around the time the boosters were rolled out.
- These differential doses are not given to someone based on their different weight or size. A small woman and a very large man could be receiving the same dose.
- Another document page she shows on the video indicates that the **vaccines are targeted at frail populations**, not the general population, and that **4 (four) doses had been planned**.
- What is scary, she says, is that **DOCTORS WOULD HAVE KNOWN ABOUT THIS**, knowing that a vaccine they were giving to someone, with its own code, would have a **certain level of active ingredient in it** as opposed to other batches with different codes.

## Pfizer Added Differing Amounts of Active Ingredient to Batches of COVID Vaccine

### NEED TO KNOW NEWS

Naomi Wolf, Bitchute

Former Clinton adviser and COVID Vaccine critic Naomi Wolf joined Steve Bannon on [The War Room](#) on Monday morning. Naomi shared her latest bombshell from her investigation into the Pfizer vaccine documents released by the US government on their COVID vaccine testing. **Naomi's team of investigators, doctors and attorneys identified several US government documents that confirm that Pfizer was adding varying amounts of active ingredient to their experimental COVID vaccines.** According to the data, the range of dangerous active ingredient went from 3?g, to 10?g, to 30?g, to 100?g depending on the batch they happened to inject you with.

As Naomi mentioned, this ties in directly with the website "[How Bad Is My Batch](#)" that was created so you could track how many adverse reaction incidents were linked to the vaccine batch you were given.

**Now there is proof via AMA documents that they are distributing different doses of the active ingredient in the COVID vaccines based on batch number.**
