

Retired Lawyer Claims Rolled Out COVID Jabs Differ From Those Tried Before Authorization (VIDEO 34 min)

Description

According to retired Australian lawyer Julian Gillespie, reports of death and injury post-jab has been rising exponentially, During his testimony, Gillespie brings up several other points regarding his concerns about how COVID-19 and the vax rollout were handled.

Referencing his country's version of the United States's vax surveillance program VAERS, Gillespie says that the number of Australian deaths related to vaccines has gone from 2.4 deaths per year on average (since 1971) to as high as 800 deaths in the last 12 months alone, and over 110,000 adverse events reported!

He also questions the official claim that the spike proteins produced by the body in response to the COVID shots are not entering the cell nucleus nor altering DNA, saying that "in a peer review report ... three weeks ago shows that the mRNA that is contained within these vaccines is also entering the nucleus. It is interfering in measurable form, with the DNA ... It is causing disruption to a number of typical chemical activities," including, but perhaps not limited to embryo health in females.
