

Russian submarine with 160 nukes on board surfaces off US coast

Description

RUSSIA/USA: Russian nuclear submarine of the Borey project, which carries 16 Bulava ballistic missiles on board, unexpectedly appeared off the coast of the United States, having caused serious concerns in Washington.

Russian submarine with 160 nukes on board surfaces off US coast

Each of the missiles in service with the submarine is capable of carrying up to ten nuclear warheads. This created an extremely serious danger for the United States, given that the US military have not been able to track the Russian nuclear submarine.

According to *NetEase* publication, Russian nuclear submarine of the Borey project (according to other sources, it was an Akula project submarine), approached the US coast unnoticed. It was possible to establish the whereabouts of the nuclear submarine with up to 160 nuclear warheads on boards after the sub started going back to the base. A submarine of this class is capable of destroying most of the territory of the United States of America in minutes.

Russian nuclear submarines will be able to constantly patrol the waters near the US coast in the event that Russia decides to build a naval base in Cuba or Venezuela, as representatives for the Russian Foreign Ministry earlier said.
