

SADS: “Sudden Adult Death Syndrome” Explodes as Young and Healthy Adults Die Following COVID Vaccine Mandates

Description

USA: The sheer number of young, healthy adults dying “suddenly” has become so well-known now, that even the corporate media can no longer ignore these record number of deaths occurring among the working class ages between 18-years-old and 65.

The correlation between these “sudden deaths” and the roll out of the COVID vaccines is indisputable, but because “correlation does not equal causation,” the corporate media and the government health agencies continue to deny that the vaccines are at fault.

Finding no other possible cause for these record number of deaths among young and healthy people, they simply lump them altogether under the category of SADS, *Sudden Adult Death Syndrome*.

But these stories are becoming so frequent now, that hopefully the blind and dumb-downed population who believed the lie are starting to wake up.

I am republishing some of these stories in this article, and while some of those who died are known to have received a COVID vaccine, some of the other ones do not publicly reveal that information.

But they are all members of institutions that mandated the COVID shots. Some are students and employees at Indiana University, and some are medical professionals who worked at facilities where the shots were mandated.

This must be one of the most evil periods of human history, where so many people in position of authority in either government positions, or as heads of institutions, are guilty of mass-murder, and as of yet none of them have faced justice.

How far does this guilt go, in participating in the genocide of an entire generation?

How about you? Are you also guilty?

If you answer with a resounding: “No way! I do not support the COVID vaccines!” – then I need to ask

you a question.

Do you own stocks in mutual funds? Is your retirement fund invested in stocks and mutual funds?

Because if so, it is very likely that whoever manages your portfolio is invested in pharmaceutical companies like Pfizer, Moderna, Johnson and Johnson, and others, as Big Pharma is the “best place to put your money” right now if one wants to maximize their profits.

That means you also share some of the guilt, even if you are not aware of where your funds are invested. Legally, you are a part owner in these companies who produced these deadly bio-weapons that are literally killing millions of people.

When will there be Operation Backtrack on the Vaccines?

9-minute video from GBN, Britain’s News Channel – Excellent watch!

Sudden Deaths in a College Town

by Margaret Menge

Three Indiana University students died suddenly about a year ago.

So did a member of the Indiana University Board of Trustees.

So did two paramedics in the area and a couple of college students who attended other universities nearby.

Two of the deaths of Indiana University students were so close together, and so baffling, that the county coroner, Joanie Stalcup, says she turned to law enforcement and asked if they knew what could be happening.

One was IU undergraduate student **Mia Roy**, age 20, whose roommate found her dead on the couch in their apartment on Tuesday, September 14, 2021.

In Bloomington, home to Indiana University, Mia Roy lived in an apartment at Stadium Crossing, a multi-building complex on Dunn Street, across from IU's football stadium on the north side of campus.

She was from Crown Point, Indiana.

News reports of her death like [this one](#) stressed that there was “no evidence of foul play or self-harm.”

An autopsy was done, and the cause of death was found to be related to a cold she'd had the week before, Stalcup said.

But she said that because this was such a rare occurrence — that a healthy young woman should die from such a mild illness — she still had questions, and so had a tissue sample sent to the CDC for testing in the fall of 2021.

She said this week that she hasn't yet heard anything back from the CDC.

A second death of an IU student of about the same age occurred within a few weeks, Stalcup said.

“In my opinion it was unusual because they were around the same age and had similar stories that surrounded their deaths,” she said. “However, there was nothing suspicious found in autopsies. There was nothing in their cause of death that was suspicious. It’s just odd.”

As with Mia Roy, an otherwise healthy young person was just suddenly dead.

And there was actually a third sudden death of an IU student that had happened just a few weeks earlier — though outside the county.

Devyn Williams, age 18, was on the last day of an end-of-summer vacation out West with her mother on Aug. 19, 2021, visiting Yellowstone and Grand Teton national parks. The next day, they were to fly to Indianapolis, where Devyn's father was going to pick her up and drive her down to Bloomington so she could begin her freshman year at Indiana University.

When reached by phone earlier this year, her mother described what happened on that terrible day, saying Devyn had an asthma attack, and that she had tried to use her nebulizer, but that it didn't work: She couldn't get her breath. By the time paramedics arrived at their rental accommodations in the park, it was too late: Devyn couldn't be revived.

Devyn had been vaccinated with the Pfizer vaccine in April, said her mother, Angela Lacy.

When asked whether her death could have been related to the vaccine, she said she could see why some people might ask this, but that she just didn't know.

An autopsy was done, said Lacy, and the cause of death was found to be related to the asthma attack.

You can read the obituary for Devyn Williams [here](#).

**

The same month, two paramedics in the Bloomington area died suddenly on the job — both while in the company of other first responders who rendered immediate assistance.

The first was **Brandon Staley**, age 46, who was [stricken](#) with intense chest pains on Aug. 8 while he was on duty as an EMT in Owen County, about 20 miles from Bloomington. He was riding in the back of an ambulance with another paramedic treating two children who had just been injured in a car accident north of Gosport when he was gripped by chest pain, lost consciousness and died.

The second was **Kyle Martincic**, age 34, of Ellettsville, the small town just west of Bloomington. He worked as an EMT and a firefighter, and was at the fire station doing physical fitness training on Aug. 23 when he [suffered](#) a “sudden cardiac emergency.”

Despite being surrounded by first responders (his fellow firefighters) who provided immediate lifesaving care, he could not be saved.

**

On July 31, 2021, the IU community and the city of Bloomington were shocked by the sudden death of an energetic member of the IU Board of Trustees — **Melanie Walker**, age 62.

Melanie Walker, a member of the IU Board of Trustees, died suddenly on July 31, 2021.

Walker was the president of TASUS Corp, a subsidiary of a Japanese manufacturing company with

more than 600 employees in the United States.

At the time she was appointed president of TASUS at the age of 34, she was thought to be the first female president of a Japanese-owned manufacturing company in the United States.

At the time of her sudden death, she was also an active member of the board of the Indiana Economic Development Corp., the IU Credit Union, the Indiana Chamber of Commerce and Susie's Place Child Advocacy Center; and president of the board of the Japan-America Society of Indiana, president of the American Heart Association executive leadership team and an Indiana delegate to the White House Conference on Small Business.

Just a few years before, in 2017, she had adopted a teenage girl named Stormy, who had spent most of her life in foster care.

Melanie Walker, right, with adopted daughter Stormy. (Photo by Lisa Walker)

Walker had been appointed to the IU Board of Trustees in 2016 by then-governor Mike Pence.

No cause of death was reported either by Indiana University or the media.

Her [obituary](#) noted only that her death was unexpected.

An acquaintance said that she'd had cardiac issues.

In addition to the three IU students who died in August and September of 2021, there were two other sudden deaths of IU students months before.

Third-year IU law school student **David Gray** died in mid-December of 2020 shortly after getting the Covid-19 vaccine, a friend of his told Crossroads Report.

Indiana University - Maurer School of Law

...

MEMORIAL SERVICE FOR DAVID GRAY

We are saddened by the loss of 3L student David Gray. We are shocked by his sudden and untimely death and offer condolences to his loved ones. The Law School will conduct a memorial service for David on Thursday, January 14 at 7:00 p.m. EST. To attend on Zoom, please register:

<https://tinyurl.com/yxcofadq> ✓

If you would like to contribute memories, notes, or photos, please send them to Dean McFadden at anmcfadd@iu.edu. She will compile them into a memory book for David's family.

“He was flying back on a plane from Mexico, and was talking to flight attendant and he just ‘nodded off,’” the friend said in an email. “She thought he went to sleep. He had massive heart attack.”

“They are not 100% sure from vaccine, but he did have it,” he added.

The friend said, however, that he did not know where or when Gray got the vaccine. The first vaccines were not administered in Indiana until mid-December.

The IU Maurer School of Law announced Gray's death in a Facebook [post](#), saying they were "shocked by his sudden and untimely death."

Gray was from New York, and was described by his friend as a "brilliant and handsome" Jewish man in his 30s.

**

On April 2, 2021 a 20-year-old IU student named **Jacob Schleinz** was talking to two girls on the balcony of a fourth-story apartment in the early morning hours when, bizarrely, they [said](#) he just stopped talking and fell over the balcony railing.

Schleinz was a student in the IU Kelley School of Business and had a summer job lined up at United Health in Indianapolis.

Several major healthcare organizations in Indiana began mandating the vaccine for employees and interns in the summer of 2021. It's not known whether Schleinz would have been required to get a vaccine in order to begin working at United Health.

People magazine wrote about his tragic death [here](#).

**

Another sudden death of a college student in the area was reported in the media in September.

A Rose-Hulman Institute of Technology student named **Erin Canning** was [reported](#) to have died "as a result of injuries sustained in an accident." No other explanation was provided.

Canning was a member of the Rose-Hulman women's soccer team. She was from Pittsburgh.

**

And ANOTHER [here](#) at a different nearby school, Indiana State University. A freshman named **Dylan McConkey** who was going to major in computer science was found dead by his roommates on Aug. 22, 2021.

**

Indiana University [announced](#) on May 21, 2021 that it was imposing a vaccine mandate on all students, faculty and staff, warning that students needed to be fully vaccinated by the time they returned to campus, and if they weren't, they would have their class registrations canceled, and their email and CrimsonCards cut off.

The university has outlined strong consequences for those who choose not to meet the COVID-19 vaccine requirement and do not receive an exemption. For students, they will see their class registration canceled, CrimsonCard access terminated and access to IU systems such as Canvas and email terminated. Those who do not meet the requirement will not be allowed to participate in any on-campus activity. Faculty and staff who do not meet the requirement will no longer be able to be employed by Indiana University. Working remotely and not meeting the COVID-19 vaccine requirement is not an option.

you can get more information about the vaccine requirement here.

Indiana University will continue to share [information about the COVID-19 vaccine requirement](#) over the summer via a dedicated page on the university's COVID-19 website as well as to students, faculty and staff through their IU email addresses. For more information about the requirement can be directed to vaxreq@iu.edu or to 812-855-4848 or 812-855-4849.

The press release quoted IU School of Medicine professor Dr. Lana Dbeibo as saying that the Covid-19 vaccines were “extremely safe and effective.”

Less than two weeks later, on June 1, 2021, the Vaccine Adverse Event Reporting System (VAERS) showed that 73 people in Indiana between the ages of 18 and 29 had gone to the emergency room following vaccination with one of the Covid-19 vaccines — either the Pfizer-BioNTech or Moderna vaccine.

In late December 2021, Scott Davison, the CEO of Indianapolis-based life insurance company OneAmerica, said that the entire life insurance industry was dealing with an unheard-of 40 percent increase in deaths among working-age people 18-64 in the third quarter of 2021.

The third quarter of 2021 included July, August and September — the same period in which the three IU students, two paramedics and IU Trustee Melanie Walker died suddenly and unexpectedly.

Superfit Scots Doctor, 46, Dies After Heart Attack While Swimming

[Hollywood LA News](#)

Mike "Kippy" Wilson, 46, was training for a triathlon when he had a heart attack and died.

The *Daily Record* [reported](#) that Doctor Wilson, 46, was pulled from Lochindorb in Grantown-on-Spey at around 12:55 am on August 18. The physician was training for a triathlon when he died.

The dad-of-two was reported missing, and emergency services went out to search the water. He was found deceased.

A native of Aberdeen, Wilson was a doctor at Dr Grays Hospital in Elgin. He was a graduate of the University of Dundee's School of Medicine and an avid surfer.

His best friend Mike Watson is publicizing a fundraiser to help alleviate the burden of his sudden passing on the wife and daughters left behind. (Wilson had not written a will, so his belongings have gone to probate, which will incur legal costs, on top of the cost of the unexpected funeral.)

gofundme.com/f/mike-wilson-memorial-fund-lets-ride-again

In mid-summer, a young doctor in Canada [died](#) a few days after collapsing during the swimming part of her triathlon training. She was one of eight doctors in Canada who passed away over a two-week period in July.

In September 2011, Mike Wilson was formally offered a physician's job at a small town near Cape Town in South Africa. His friends advised him to come back home to Scotland. ?

Wilson's BFF Mike Watson proudly posted in May 2021 that he had himself injected with synthetic mRNA.

"Thank you, NHS."

Besties Mike Wilson and Mike Watson on May 16, 2022 — Align Ride

On August 1, 2022, the athletic 64-year-old husband of Wyoming State Senator Wendy Schuler died of a cardiac event while mountain biking on a park trail.

On August 6, 2022, Ohio State University medical student Mason Fisher collapsed and died a few miles before reaching the end of what would have been his third completed Pelotonia bike ride.
