

## SATELLITE IMAGERY CONFIRMED STORM SHADOW MISSILES MISSED TARGETS IN SEVASTOPOL, CRIMEA

### Description

**RUSSIA/UKRAINE :** On the morning of March 25, the Armed Forces of Ukraine officially declared that two large landing ships Yamal and Azov of the Russian Black Sea Fleet were destroyed in Sevastopol.

Indeed, the satellite imagery of the Sevastopol Bay showed confirmed that two Storm Shadow missiles broke through Russian air defense forces; but they missed their targets. One of the missiles hit the pier next to the large landing ship. Another missile struck an empty dockage facility.

There were no casualties among the sailors during the strike on the ships in the harbor.

It is obvious that the Ukrainian military failed to destroy these ships despite the massive expensive attack.

Another target was a building located on Rudnev Street in Sevastopol. The building reportedly is an old military base which previously hosted Ukrainian communications support unit. A missile damaged the building but there were reportedly no casualties.
