

Skynet 2.0: Unstoppable Secret Network Bypasses Internet

Description

According to popular tech expert, Rob Braxman, “There’s a secret network in operation today and this network can send centralized commands from its master to slave devices without anyone being able to stop it.” It can also track your precise location even when your phone is turned off.

This is an important concept to understand and Braxman’s explanation is one of the more understandable ones, breaking it down piece by piece. I recommend that you listen to this video and try to understand the massive surveillance threat that affects billions of devices.

Braxman further states, “It has the most advanced location tracking capabilities and no one can intercept its traffic. It can bypass the internet. There are billions of devices that it can utilize and potentially control.”

Tracking the geographic location of people and mobile devices is critical to the success of Technocracy. Amazon and Apple are two giants that are using this tech for data mining. Devices like phones can be turned on remotely, even if not connected to the Internet.
