

Slipping Under the Radar: Pfizer Documents, Pandemic Treaty and the Magical Disappearance of Covid

Description

The war is a distraction, [says Strange Sounds](#), it's pretty straight forward – when everyone is looking up, keep your eyes on the ground. Keep a close eye on what's slipping under the radar.

Pfizer Documents

In the first week of January a federal judge in Texas, Mark Pittman, ordered the Food and Drug Administration (“FDA”) publicly release the data it relied on to license Pfizer’s Covid injection.

Rather than producing [500 pages a month](#) — the FDA’s proposed timeline — Pittman ordered the agency to turn over 55,000 a month. That means all the Pfizer injection data should be public within about 8 months rather than the 55 years, initially requested, or the [75 years the FDA subsequently requested](#).

On page 3 of the Judge’s [four page order](#), the FDA must produce 55,000 pages every 30 days beginning on or before 1 March 2022. That was yesterday.

All released Pfizer documents and data can be found [HERE](#).

Pandemic Treaty

An [international pandemic agreement](#) “to strengthen pandemic prevention, preparedness and

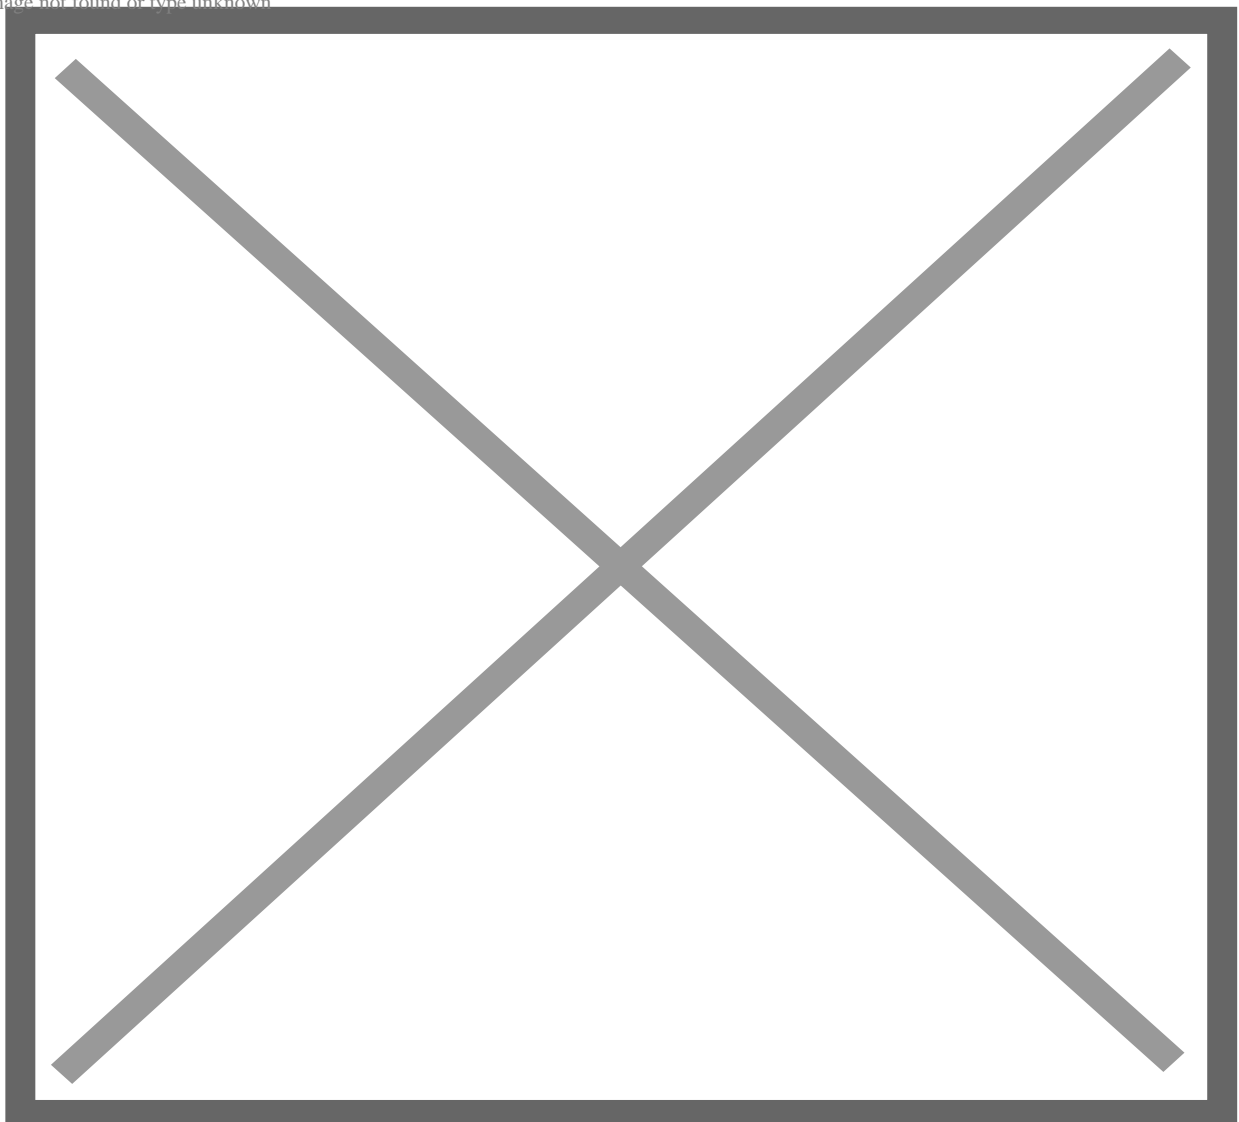

response” was due to be negotiated at the WHO in Geneva yesterday. Under the [decision adopted on 1 December 2021](#), the intergovernmental negotiating body (INB) was to hold its first meeting by 1 March 2022 (to agree on ways of working and timelines) and its second by 1 August 2022 (to discuss progress on a working draft).

The [agreement is backed by](#) the Bill & Melinda-Gates Foundation and US billionaire Marcel Arsenault.

Putin for Nobel Prize

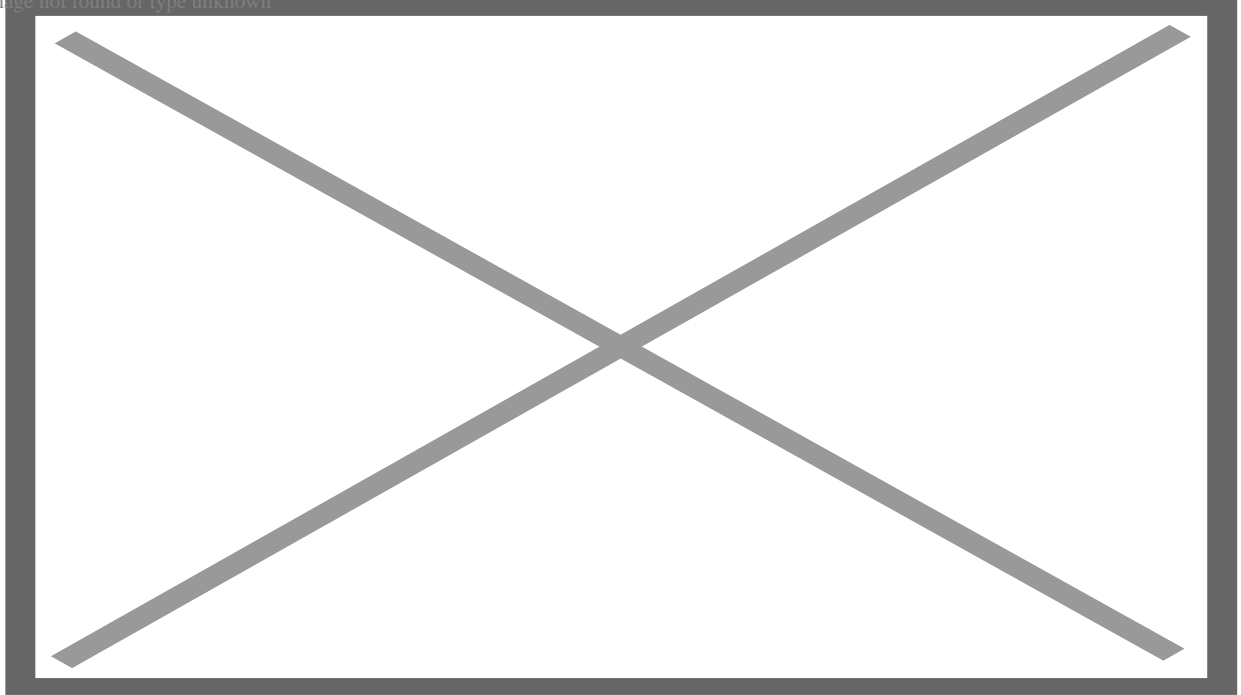

Vladimir Putin has managed to do in a few days what the UK and other governments weren't able to do in in two years – eradicate Covid. He has been so effective that [Strange Sounds](#) is suggesting he be nominated for a Nobel Prize.
