

## STUDY REVEALS: mRNA From Pfizer Shot Can Be Reverse Transcribed Into DNA

### Description

A study published earlier today in Current Issues in Molecular Biology claims to have presented evidence of “fast entry of BNT162b2 into the cells and subsequent intracellular reverse transcription of BNT162b2 mRNA into DNA.”

Here's what's stated in the abstract of the study researching the Pfizer C-19 jab, with a research name *BNT162b2*.

“Preclinical studies of COVID-19 mRNA vaccine BNT162b2, developed by Pfizer and BioNTech, showed reversible hepatic effects in animals that received the BNT162b2 injection. Furthermore, a recent study showed that SARS-CoV-2 RNA can be reverse-transcribed and integrated into the genome of human cells. In this study, we investigated the effect of BNT162b2 on the human liver cell line Huh7 in vitro. Huh7 cells were exposed to BNT162b2, and quantitative PCR was performed on RNA extracted from the cells.

We detected high levels of BNT162b2 in Huh7 cells and changes in gene expression of long interspersed nuclear element-1 (LINE-1), which is an endogenous reverse transcriptase. Immunohistochemistry using antibody binding to LINE-1 open reading frame-1 RNA-binding protein (ORFp1) on Huh7 cells treated with BNT162b2 indicated increased nucleus distribution of LINE-1.

PCR on genomic DNA of Huh7 cells exposed to BNT162b2 amplified the DNA sequence unique to BNT162b2. Our results indicate a fast up-take of BNT162b2 into human liver cell line Huh7, leading to changes in LINE-1 expression and distribution. We also show that BNT162b2 mRNA is reverse transcribed intracellularly into DNA in as fast as 6 h upon BNT162b2 exposure.”

Or, to translate – the COVID jab could really affect your DNA structure.

Anyone who claimed the COVID-19 mRNA jabs could affect your DNA was censored or labelled a “conspiracy theorist,” and still is to this day!

“Alden et al, Lund University, Sweden, confirms one of our worst fears. The exogenous genetic material coding for the dangerous Spike protein is reverse-transcribed into the human genome; possible long-term constitutive expression/synthesis of disease-promoting/lethal Spike,” said Dr Peter McCollough.

“Our study shows that [Pfizers Vaccine][.] can be reverse transcribed to DNA [..], and this may give rise to the concern if [vaxx]-derived DNA may be integrated into the host genome and affect the integrity of genomic DNA, which may potentially mediate GENOTOXIC SIDE EFFECTS.”
