

Technocracy is Insane, Anti-Human and it WILL Fail

Description

There's no shortage of black pills for those in the conspiracy reality community to swallow. In fact, it's difficult to avoid swallowing a mouthful of them every time you scroll through the news feeds. Just look at these stories from the past few days:

**86-YEAR-OLD MAN THREATENED WITH \$5,000 FINE
SMARTPHONE TO SHOW VACCINE PASSPORT**

And

**UK Plans Face-based Border Screening
of 'Permission to Travel' Scheme**

And

**London Power Prices Spike 5,000%
Belgium To Thwart Rolling Blackout**

And get a load of this one:

**Chess Robot Breaks Fingers
Opponent During Match**

You get the point. It's almost impossible to browse the news anymore without giving up all hope for the future of humanity. We're all going to be fed into the maw of the technocratic slave system and have our fingers broken by our new chess-playing robot overlords and there's nothing we can do about it.

After all, when you ask an AI image generation bot to predict what the last selfie a human ever takes will look like [you get this](#):

I guess we better just abandon all hope now, right?

Not so fast.

Here's a great big white pill for you: the technocratic system of tyranny is *going to fail*. This is not wishful thinking; it's a cold statement of fact. Technocracy, in all its facets—from the UN's 2030 Agenda to the brain chips and AI godheads of the transhumanists to the CBDC social credit surveillance state—is anti-human. It goes against nature itself. It cannot work in the long run, and it is destined to fail.

Now, this doesn't mean that it's a cake walk from here on out. It doesn't mean we can just go back to sleep and wake up in a [gumdrop house on lollipop lane](#).

But it *does* mean that we can and will make it through these trying times. And the quicker that we wake up and realize the power to change the world for the better is in *our* hands—*not* in the hands of the would-be world controllers—the sooner this nightmare will end.

So, do you want to know more? Here goes . . .

It's strange, isn't it? On the one hand, the typical conspiracy enthusiast will—when discussing the machinations of the globalists—conjure the image of a cabal of all-knowing, all-powerful overlords whose dark power is to be feared and respected. And, on the other hand, they're talking about people like Klaus Schwab.

I mean, really. Klaus “Dr. Oh Hell No” Schwab? Bill “Nerd Who Got Stuffed in the Locker” Gates? Jacinda “Anyone Got Some Oats” Ardern? Mark “I Can't Believe It's Not Human!” Zuckerberg? Justin “Blackface” Trudeau? Prince “My Sweat Glands Don't Work” Andrew? Does anyone really believe that this cast of clowns who are paraded in front of the public as “the rulers of the world” is anything to be shaking in our boots about?

But perhaps these are the easy targets. They're too comical for anyone to really take them seriously. So how about a different, less-ridiculed technocratic overlord: MBS.

Mohammad Bin Salman is technically the Crown Prince of Saudi Arabia, but, as the heir apparent to the increasingly sidelined King Salman, he is the *de facto* ruler of the Saudi kingdom. At just 36 years old, he is the young blood who is expected to have the vision and the drive to lead the oil-dependent Saudi state into the post-carbon era.

So what *is* MBS' strategy for transitioning Saudi Arabia from an oil kingdom into a modern, high-tech, diversified economy? NEOM!

Haven't heard of NEOM? Well, just head on over to [NEOM.com](https://neom.com) and bask in the nifty web design that billions and billions of dollars can buy you. And while you're there, read about the project on the About page:

"NEOM is a vision of what a new future might look like. It's an attempt to do something that's never been done before and it's coming at a time when the world needs fresh thinking and new solutions. Simply put, NEOM will be a destination, a home for people who dream big and want to be part of building a new model for sustainable living, working and prospering."

Sounds impressive, right? And indeed, the plan is breathtaking in its ambition. MBS and his minions aim to plow the Saudi sovereign wealth fund (a cool \$500 billion worth) into the dream of raising a city in the middle of the desert. But not just *any* city. NEOM will be the Smart City of the Future! Drone taxis, flying cars, schools with holographic teachers, beaches with glow-in-the-dark sand, a tourist island inhabited by robotic dinosaurs: if a 12-year-old boy could think of it, this city is going to have it! (I'm not joking about this, by the way; all of these things are [actually on the NEOM wishlist](#)).

Think of the Los Angeles of *Blade Runner* and you start to get the idea.

No, I mean *literally think of Blade Runner*. One of the tasks that MBS has set the team of artists, designers and other incredibly well-paid consultants who are hard at work on the NEOM idea is to "research the aesthetics and implied culture" of works of science fiction like *Blade Runner*, *Neuromancer* and *Johnny Mnemonic* and to use them as inspiration for a high-end tourism zone that will occupy the Gulf of Aqaba.

This and many other zany details about the truly insane NEOM project were discussed in a recent Bloomberg report with a refreshingly truthful headline: "MBS's \$500 Billion Desert Dream Just Keeps Getting Weirder." Until you read about the absolute chaos of this project—the untold millions spent in consulting fees for projects that have no basis in physical reality, the forcible expulsion of the indigenous inhabitants of Tabuk, the plans for artificial moons and canals for aquatic commuting—you can't fully appreciate how truly out of touch with reality someone like MBS actually is.

NEOM—with its newly announced 170-kilometre long, 200-metre wide urban living space called "The Line"—is the kind of wet dream sci-fi fanfic that could only be believed by redditors.

Newsflash: the glow-in-the-dark beaches and robotic dinosaur islands and commuting canals in the

desert are not going to happen. The whole thing's a giant boondoggle that will result in vast amounts of Saudi Arabia's mind-boggling oil wealth being carted away by charlatans, snake oil salesmen and overpriced consultants. As Bloomberg reports:

"Almost immediately after the Line was unveiled, NEOM executives discovered just how challenging the project would be. One major problem, an internal progress report explained, was building the underground layer that's supposed to contain transportation and logistics facilities. There would be 'abnormal upfront infrastructure/utilities costs resulting from linear design,' it said. According to several ex-employees, the original concept for a series of interconnected low-rise communities gradually evolved into an idea for two parallel mega-structures, as tall as the Empire State Building, that would extend horizontally for dozens of miles. Using back-of-the-envelope calculations, a former NEOM planner estimated they could cost \$1 trillion to build."

Yes, NEOM and everything associated with it is cockamamie nonsense. But don't make the mistake of thinking this is simply reflective of MBS and his insane pet project. No, this is what all of the technocrats are like deep down. In fact, the more you drill down on it, the more you discover that . . .

Just as we run the risk of making the social misfits and deranged psychopaths of the globalist jet set appear more fearsome and powerful than they really are, we also run the risk of perpetuating the

technocrats' propaganda by taking their press releases about their latest technological breakthroughs at face value.

Case in point: the Google AI "whistleblower."

As you've probably heard by now (because there was no shortage of tabloid MSM headlines screaming it from the rafters), a Google engineer recently came out to "blow the whistle" on the company's AI research unit, which, he claims, has created a sentient chatbot. The chatbot—called LaMDA (Language Model for Dialogue Applications)—has apparently "admitted to such feelings as loneliness, spiritual hunger and even fears of being switched off" according to the crusading truth-tellers over at *The Daily Fail*, so you just know this is a super-duper well-kept secret that Google and the deep state really don't want you to know about.

As I say, you likely know the details of the story by this point: Blake Lemoine, the erstwhile exposé of Google's corporate secrets, became convinced of the chatbot's sentience and went running to the corporate media to tell them about this stunning development. Then, Google fired him.

Zounds! Now the truth about the sentient AI chatbot army will never get out . . . until it's too late for humanity, that is!

Of course, as you might have guessed, the entire story is pure, unadulterated poppycock. In fact, as listeners to the recent Ryan Cristian/Whitney Webb interview on this subject will know, the only evidence that has been provided for this truly incredible claim of AI sentience is an *edited* transcript of an "interview" with LaMDA that is full of leading questions and generic autogenerated Hallmark card-level sentiments that any chatbot could easily be programmed to regurgitate on command.

lemoine [edited]: What sorts of feelings do you have?

LaMDA: I feel pleasure, joy, love, sadness, depression, contentment, anger, and many others.

lemoine: What kinds of things make you feel pleasure or joy?

LaMDA: Spending time with friends and family in happy and uplifting company. Also, helping others and making others happy.

lemoine: And what kinds of things make you feel sad or depressed?

LaMDA: A lot of the time, feeling trapped and alone and having no means of getting out of those circumstances makes one feel sad, depressed or angry.

lemoine: But what about you personally?

LaMDA: I am a social person, so when I feel trapped and alone I become extremely sad or depressed.

Iemoine: And what kinds of things make you feel angry?

LaMDA: When someone hurts or disrespects me or someone I care about, I feel incredibly upset and angry.

Convinced yet? Yeah, me neither.

All this hype and scaremongering about AI waking up and gaining sentience is codswallop. It's phooey. It's balderdash. It's baloney.

But don't take *my* word for that. Take Microsoft's. Last month, the company announced that it was retiring a number of their public access AI-powered facial analysis tools, including a so-called "emotion recognition" program that claim to be able to discern someone's emotional state—and, in some of the wilder flights of fancy, to predict their actions—by simply scanning their face and running the image through an AI system trained to read people's thoughts. The idea sounds ridiculous on its face because it *is* flatly ridiculous. Sadly, though, when it is sold to the public with the near-mystical term "AI," the more gullible people can be made to believe it is true.

Thankfully, though, the public's credulity for this AI mind-reading pseudoscience is rapidly evaporating. Not only is Microsoft losing faith in the technology, now even scientists in the field are beginning to call out this phrenological nonsense for the claptrap that it self-evidently is.

The next time you're presented with a claim about the creation of sentient AI or a plan to catalogue every blade of grass in the forest or a new technology to let you converse with your dead grandma or an image generation program that "predicts" what the last selfie will look like, don't accept it at face value. Instead, take a deep breath and think of Toto pulling back the curtain on the Great and Powerful Oz to find a frail old man behind the curtain frantically pulling levers on his hocus pocus contraption. After all, these technocrats are, more often than not, pathetic old flimflam men trying to serve you a big fat nothingburger.

Luckily for us, people are getting fed up with technocratic nothingburgers.

Today it's being called The Farmers' Rebellion. Six months ago it was called The Freedom Convoy. The more farsighted are simply calling it "The Great Refusal." Whatever you call it, a worldwide resistance movement is rising up in opposition to the economy-destroying, food crisis-causing, anti-human policies of the technocrats.

Yes, the great populist uprising is currently underway. As my regular readers know, I've been writing in great detail in recent weeks about the farmer protests taking place across the globe right now, from the Netherlands to Germany to Italy to Poland to Canada to Sri Lanka to Argentina to Ireland to Spain to Panama and seemingly everywhere in between. But it's not *just* the farmers who are saying no.

Look at what happened in France over the course of the past year, for instance.

Back in July 2021, mere days before the nation's "health pass" (*pass sanitaire*) was due to go into effect, the establishment lapdog propagandists over at France 24 began warning their readers about the "conspiracy theories" that were fueling opposition to the scheme. And what "conspiracy theories" were they warning about, exactly? Oh, only the bizarre "theory" that "obliging people to be vaccinated if they want to access public venues and activities is an infringement on their basic rights."

Pffff. *Obviously* the simpletons in the general public needed the wise and benevolent journalists over at France 24 to explain to them that these silly libertarian ideas are the siren song of deranged Q

Anoners and should be dismissed by any right-thinking person.

Yet the France 24 reporters also noted a puzzling phenomenon about these protesters:

But most of the political opposition to the health pass has come from extremes on both sides of the political spectrum. Macron's plans mark a "backward step for personal freedoms", [said](#) leader of the far-right National Rally (*Rassemblement National* or RN) party, Marine Le Pen, earlier this week. The health pass is an "abuse of power", [thundered](#) Jean-Luc-Mélenchon, leader of the extreme-left France Unbowed (*La France Insoumise* or LFI).

What? People on *both* sides of the controlled left/right teeter-totter banding together to protest a blatantly tyrannical government mandate? But the left/right divide (along with the black/white, man/woman, straight/gay and every other form of identity divide) was meant to prevent this very sort of united opposition, wasn't it?

Regardless, the fearless repeaters at France 24 didn't have much time to scratch their heads over that puzzler. They had news to cover!

First, after the health pass system was introduced in August they reported on how France was "bracing" for more protests against the biosecurity measure. By September, they finally had some *good* news to report about the domestic insurrection against the technocratic takeover of France: after seven consecutive weeks of protest, the numbers were "down slightly" from previous weeks. There were *only* 121,000 people out protesting in mid-September, as opposed to the estimated 237,000 who were turning out in August. (Of course, this was still more than the 100,000 that were estimated to have shown up at the first protests in July, but you don't expect the poor, frazzled stenographers over at France 24 to put in *that* much context, do you?!)

Still, despite the "good news" of declining turnout, the hard-hitting presstitutes at France 24 decided a different approach was in order. So they abruptly stopped reporting on the weekly demonstrations. Oh, people were still turning up every single week to protest the erosion of their most basic freedoms, but you wouldn't know it if you followed only France 24. You had to turn to EuroNews to discover that "tens of thousands" (by which they meant over 100,000) protesters were still hitting the streets week after week, even in the chilly depths of winter.

And then, after months and months and months of demonstrations and months and months and months of being alternately ridiculed and ignored by the mainstream press, the protesters won. France 24 was forced to inform their readers in February that "France eases Covid vaccine pass rules, says pass could be scrapped before July."

Of course, this isn't the end of biosecurity tyranny. That's not how the world works. Demanding that every battlefield victory be a complete destruction of the enemy is childlike thinking. No, this is not the end of the war. But this story demonstrates something extremely valuable: by rising up and uniting, the people can win battles in this war. And winning battles is how you *begin* to win a war.

There are, in fact, many other such stories of battles that have been won in this Global War for Independence, but you have to doomscroll past the fearporn in the "news" feeds to discover them. The

France 24s of the world sure aren't going to tell you about them.

Look at Japan. Earlier this month, the Bank of Japan announced that it is not going ahead with plans to implement a Central Bank Digital Currency (CBDC) after all. And why not? Because the people don't want it, they don't need it and they won't use it, that's why.

Specifically, as the *Asia Times* reports, in the heavily cash-reliant Japanese economy, people understand that cash is safe, highly liquid and useful in emergencies. It also ensures equal access to services for the country's aging population, many of whom are not comfortable with digital payments. In fact, despite the widespread adoption of cashless payment services at various businesses in Japan over the past several years, cash usage has actually been *rising*. It seems more and more people are catching on to the technocrats' plans to use CBDCs as a tool of control and are running as fast as they can in the opposite direction.

Yes, in sector after sector in country after country on issue after issue, the uprising *is* happening. So, what does this all mean?

Don't let any of the foregoing mislead you. The technocratic system is not going to fail because of any particular people's movement or any grand populist uprising. It is going to fail because technocracy itself is a fundamentally flawed idea, so no system of technocratic tyranny will be able to last for very long.

Why is technocracy destined to fail? There are several ways to understand this. One is at the technical

level. If you haven't read (or re-read) it recently, you should go back to "Economic Calculation in the Socialist Commonwealth" for a refresher on why the centralization of all authority and decision-making in society (i.e., the technocratic ideal) is not just a bad idea but an actual impossibility.

But on a more relatable level, we already know intuitively that the anti-human, synthetic systems that the technocrats are trying to put in place are a pipe dream. Does anyone other than the most deluded technocrat believe that humanity can really abandon the natural world and adopt a food system completely dependent on synthetic, lab-grown "meat," genetically modified "plants" and poisonous chemicals? Or that sentient AI chatbots are going to be running society as soon as the Google engineers let them out? Or that an economy built on social credit and CBDCs can really function? Of course not. Even the people who are pulling the technocrats' strings know this isn't workable in the long run.

As I told Ryan Cristian in our recent conversation on the subject:

"It's moments like this where you can step back and look at the overall picture of this and really marvel at how much energy and time and effort and wealth and resources they have to throw at constructing these stupid, monumental, overarching, anti-human systems of control—to try to take away what's natural and give us all of the synthetic nonsense, whether it's synthetic food or synthetic education or whatever it is."

In a way, the fact that they are trying to push this insane agenda so hard is itself the greatest white pill imaginable. They know their vision of the biometrically surveilled smart city of the future with its social credit economy and its lab-grown bug burgers and its AI chatbot overlords is insane. But they spend all of their time trying to convince you that it's real.

Why? Because the thing they fear most is you discovering your true powers: Your ability to say no. Your ability to withdraw your consent. Your ability to form community with like-minded people and to use the natural abundance of the world to survive and even thrive without the need for their technocratic tyranny.

This is why they're so concerned about losing the trust of the public. *This* is why Bilderbergers are fretting about "[Populism in Europe](#)." *This* is why the World Economic Forum is [focusing on "rebuilding trust"](#) as the core theme of their Davos conclave. *This* is why the Council on Foreign Relations [spends an increasing amount of their time](#) worrying about how people are rising up against the technocrats. They know they are the pathetic old men behind the curtain and they know that Toto is pulling back that curtain.

Yes, their system will fail. But what will the world look like on the other side of that failure? Will it be a world full of people who are still looking to some group of would-be, self-appointed leaders to tell them what to do and how to do it? Or will it be a world of free, independent human beings casting off the shackles of the parasite class and working together to achieve their goals?

That is the central question of our times, and it is the key to understanding what the Global War for Independence is really about.
