

Think this might be where the “monkey pox” came from???

Description

The Commie Bullshit Never Ends

“I’m sure that ultimately this will be the largest outbreak of monkeypox that we’ve had outside of the endemic areas in Africa,” Daniel Bausch, infectious disease expert and president of the American Society of Tropical Medicine & Hygiene told [Axios](#)

That said, Bausch doesn’t think there’s cause for concern just yet.

“I don’t think there’s a reason for panic. I don’t think we’re going to have tens of thousands of cases.”

Prof Anne Rimoin, professor of epidemiology at the UCLA and a world renowned monkeypox expert, told the *Telegraph* that **vaccinating close contacts of confirmed cases, also known as ring vaccination, is a good option for health officials.**

She added that **the public should not, at this stage, be too concerned.**

I'm not exactly sure what's going on, but I immediately questioned if this has anything to with the CDC lab monkeys escaping from the transport truck in Pennsylvania back in February.

So I dug into it and what I found was interesting and highly alarming.

I split it into multiple posts so I can attach all of the supporting links.

The United States government has ordered 13 million monkeypox vaccines from a European pharmaceutical company after a Massachusetts man became the first American diagnosed with the virus in the pox family in 2022.

<https://www.dailywire.com/news/u-s-buys-119-million-worth-of-monkeypox-vaccines-after-first-case-diagnosed-in-massachusetts>

2) A quick refresher. February 1, 2022, a CDC transport carrying 100 “possibly infected” lab monkeys, crashed in Pennsylvania and 3 monkeys escaped for a few days and eventually were caught and killed. The Monkeys were flown from Mauritius, a small island 400 miles off the coast of Madagascar, to New York, and were allegedly being transported by truck to an undisclosed “CDC Quarantine Facility”.

The CDC have been “tight-lipped” about what possible infections the monkeys could have been carrying. The airline, Kenya Airways, declined to disclose who shipped the monkeys, but said they were cancelling their subscription of providing their transport to assist the CDC.

Who is sending infectious lab monkeys to the CDC from tiny islands in Africa? And why are all parties involved so desperate to keep it a secret? Is this how the black site biological network traffics pathogens back to America? Using animals as vessels to hide biological weapon trafficking? The most

damning evidence in Ukraine was found at veterinary clinics.

3) Monkeypox was originally discovered in experimental lab monkeys in Denmark in 1958 which were shipped from Singapore. The first human outbreak occurred in The Democratic Republic of the Congo, 12 years later in 1970, as a result an “intensified effort due to Smallpox vaccination”, by the United Nations. The WHO and CDC claim that since smallpox was mostly eradicated, monkeypox took the place in the niche opened up in The Congo. Needless to say I don’t believe them.

Keep in mind the US CIA played a SIGNIFICANT role in the warfare, assassinations, and military revolutions that took place in The Congo and all of central Africa in the 60s and 70s. They assisted Joseph Mobutu in a military coup, aka US CIA Colour Revolution. In November, 1970, The Congo held an “election” with only Mobutu’s name in the ballot. This also happened to be the same year that the monkeypox outbreak occurred, leading up to the election.

I don't know if the outbreak and CIA involvement are connected, but some of the biggest players in the international biological network, the WHO, CDC and CIA, just seem to be hovering around all of the outbreaks in the world since the 1940s. Whether they be in Africa, Ukraine, China, the same entities are always involved and end up being the beneficiaries of the outbreaks.
