

TROUBLING SCIENCE EMERGING ON SPIKE PROTEIN – THE HIGHWIRE (VIDEO 16 min)

Description

Last week it was Dr. Peter McCullough who raised the alarm about the #Covid vaccine spike proteins that the mRNA causes to be produced endlessly. Now, another respected professor, viral immunologist from Canada, Byram Bridle PhD, brings forth more corroborating evidence from Japanese bio-distribution studies, suggesting the toxic protein in the shot distributes all over the body within as little as 15 minutes and circulates billions of the spike proteins for at least 2 weeks post-injection. Del says they have managed to convince us to take one of the worst products ever designed.
