

## Boston Dynamics unveiled (2024)

### Description

**US : Boston Dynamics unveiled Wednesday a new humanoid robot that creepily moves like no other robot has moved before.**

The new fully electric Atlas robot represents a path to commercialization and a new generation of robots that will leave folks asking if this is the beginning of the ‘Skynet’ (Terminator) robot.

“This week we announced the retirement of our hydraulic Atlas and unveiled what comes next—a fully electric Atlas robot designed for real-world applications,” Boston [Dynamics wrote in](#) a press release.

Musk tweeted an image from the horror movie “The Ring,” referring to the iconic scene in which the character Samara emerges from the television in a scary crab-like fashion, at Boston Dynamics.

Demand for humanoids in factories will likely erupt by the mid-2030s. After that, the commercialization of these robots should drive down prices. This could unlock the potential for these robots infused with AI to work in the service industry or be adopted by households.

[This is all terrible](#) news for low-skilled, low-wage workers (read: “AI Will Lead To 300 Million Layoffs In The US And Europe”). Before all of this, these robots will be adopted by militaries.
