

WEF: 'We're Going to Microchip Your Children'

Description

WORLD: The World Economic Forum (WEF) has announced plans to microchip children around the world as part for their 'Great Reset' agenda for humanity.

Not content on [depopulating the planet](#) and [censoring the internet](#), the WEF says it now wants our children to be implanted with microchips to “make these amazing technologies a part of our lives.”

It wasn't that long ago that the idea of humans being microchipped by the elites was dismissed as a “conspiracy theory.” But now the world elites' most vocal outlet is predicting that chip implants will eventually become part of our normal existence.

[Humansbefree.com](#) reports: And the WEF makes a case that implanting chips into children could be viewed by parents as a “solid, rational” move. All of this crops up in a blog post on the organization's website dedicated to the future of augmented reality (AR), and what is referred to as “an augmented society.”

Like in many of WEF's other takes on the future of various types of technology, the emphasis is put on inserting the “right,” i.e., its own “vision” in the direction these should be developing, with the inevitable mention of undefined society stakeholders who will hold the key to the ethics issue of it all.

The WEF is talking up the allegedly broad usefulness of AR going forward in fields such as healthcare, education, and professional settings, with the underpinning notion of providing guidelines as to how to “ethically” regulate this vast potential power – and therefore, when all's said and done, control it.

The WEF calls AR and similar tech transformative – but in need of “the right support, vision, and audacity.”

Once again it isn't at all clear why “audacity” is thrown in, unless it is a euphemism to sell some pretty outrageous “visions” that the WEF is expressing, such as replacing drugs with brain implants that will

manipulate the body with electrical pulses, and pairing all sorts of chips put into humans through surgery, with sensors one might find in a chair.

And so, with the human and the chair “seamlessly integrated,” the quality of life across the board shoots up, the Davos-based group promises.

“As scary as chip implants may sound, they form part of a natural evolution that wearables once underwent. Hearing aids or glasses no longer carry a stigma,” the blog post reads. “They are accessories and are even considered a fashion item. Likewise, implants will evolve into a commodity.”

But critics of these trends say their opposition has nothing to do with “stigmas” – rather with serious concerns about civil rights, privacy, and the very concept of human autonomy.
