

WORLD STARVATION Coming Soon!

Description

You have to be prepared for a world famine! It's coming soon!

The globalist will do whatever it takes to bring this crisis to the world! Everything smells like an organized and engineered crisis.

What happens nowadays isn't a coincidence! Everything has been previously planned!

Senators sound the alarm.

Kansas Senator Roger Marshall issued a warning about worldwide famine, which is approaching, due to the Ukraine war and rising input prices.

"This will be worldwide famine. I think it will be even worse next year than this year. So if 12, 15% of the wheat comes from Ukraine that's exported, and they're having problems getting fertilizer, they're having tractors in the field, all the diesel fuel is going towards their war efforts..."

I think American farmers are doing their best to respond, but we can't get fertilizer. The fertilizer prices have quadrupled. Diesel food has doubled. So many of the fertilizers and the herbicides we can't even get right now."

Watch:

From the video:

"Farmers — they're dealing with a shortage of fertilizer, record-high diesel prices, and worker shortages. This is all going to mean less production, less production of food is going to equal higher food prices for lower-income countries.

This is going to mean food insecurity riots, and worst-case — so worst-case scenario is starvation. President Biden acknowledged the upcoming food shortage he said at a G7 meeting with NATO leaders with regard to the food shortage, yes, it's gonna be real."

FERTILIZER: THE ROOT of America's Food Shortages

FERTILIZER AVAILABILITY IS PLUMMETING WORLDWIDE

Russia is the top exporter
of fertilizer in the world*... but
the war in Ukraine and sanctions
have crippled their supply.

US FARMERS RELY ON FERTILIZER IMPORTS

In the US, we import more
fertilizer than we export.*

With global
inventory
shrinking by
the day, our
supply is about
to plummet!

AND WE CAN'T GET THE INGREDIENTS TO MAKE IT OURSELVES

Russia and Belarus are
top global producers of
fertilizer ingredients:

UREA

POTASH

AMMONIA

These supplies are
now cut off.

You can be prepared for this! The only thing you have to do is to fill your pantry! Also, you can plant your own garden and get to know local farmers. In case you can afford it, stock up on long-lasting emergency food.

Emergency food is those food kits packed with 2,000 + calories per day that can last a long time!

Today is the best day to start preparing yourself for the upcoming tough times!
