

You were just a Lab Rat: Covid Vaccines have caused a Dangerous & Deadly Alliance between Graphene, Nanobots, mRNA, and Nanotechnology

Description

 Print  PDF  Email

In the shadowy realm of nanotechnology, a chilling alliance has emerged, one that holds the potential to shape our future in ways unimaginable.

At the heart of this union lies the insidious presence of lipid nanoparticles, tiny carriers designed to transport genetic material deep into our cells.

But behind their seemingly innocuous facade lies a dystopian reality, where the boundaries of human control and manipulation blur.

Because following the roll-out of the Covid-19 injections, a chilling alliance between graphene nanobots, mRNA technology, and nanotechnology has emerged, casting a sinister shadow over our collective future.

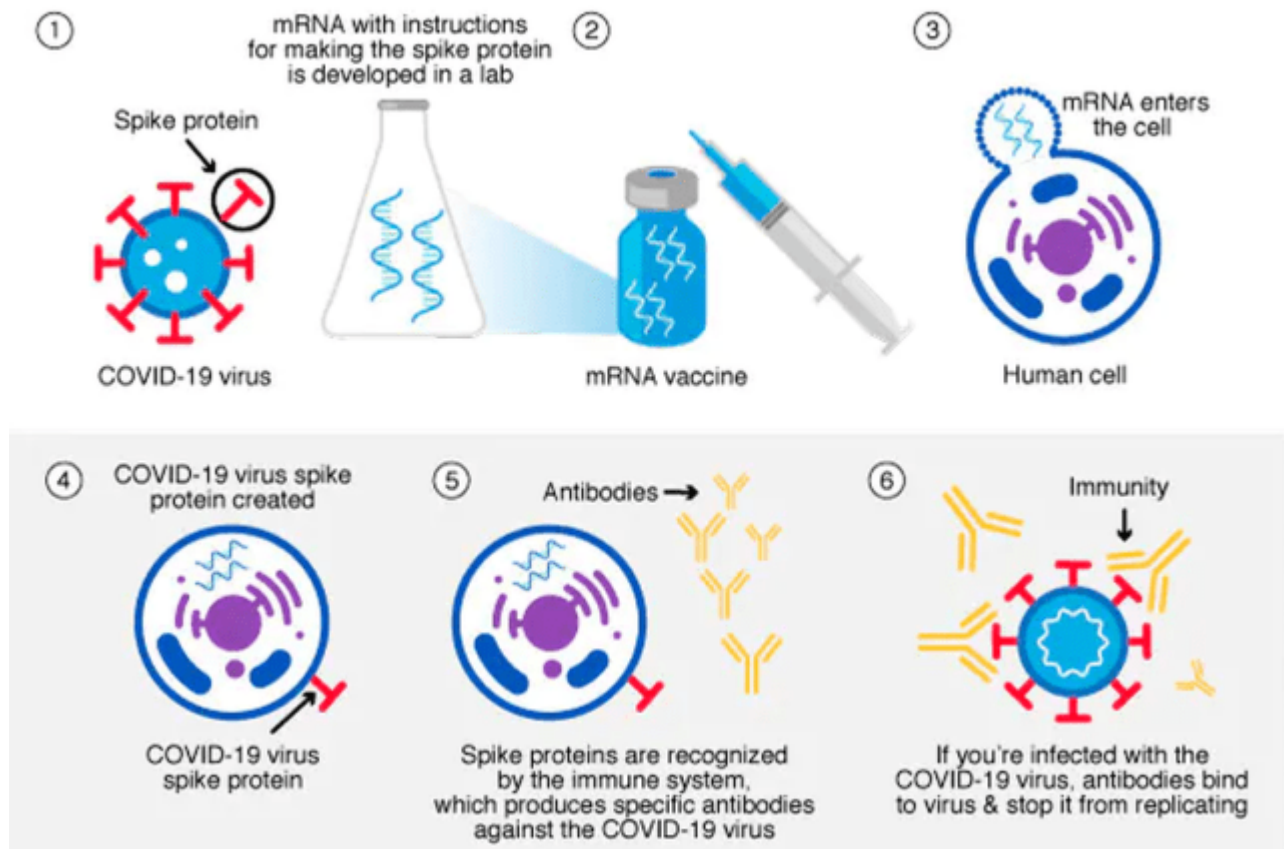

It is our duty to expose the dystopian, harmful, and dangerous consequences that await us in this treacherous landscape.

By peering behind the deceptive veil of innovation, we unveil the dark intentions and potential risks lurking within the depths of corporate agendas and power-hungry institutions.

Nanotechnology in Covid-19 Vaccines:

Nanotechnology has become an increasingly popular tool in the development and delivery of medications and vaccines. Pfizer and Moderna, two of the major players in the COVID-19 vaccine development, have utilized nanotechnology in their mRNA vaccines.

The Pfizer-BioNTech vaccine uses lipid nanoparticles as a delivery system for the mRNA that encodes the spike protein of SARS-CoV-2. These lipid nanoparticles encapsulate and protect the mRNA, enabling it to enter human cells and induce an immune response.

Similarly, the Moderna vaccine uses lipid nanoparticles to deliver the mRNA encoding the spike protein. The lipid nanoparticles are designed to protect the mRNA from degradation and facilitate its entry into human cells.

These lipid nanoparticles are tiny particles composed of lipids, or fats, which encapsulate the mRNA strands and protect them from degradation. While this technology has been hailed as a breakthrough in vaccine development, it also raises concerns about potential risks and unintended consequences.

One of the main concerns surrounding lipid nanoparticles is their potential to induce harmful immune responses in the body. The lipid composition and structure of these nanoparticles can trigger inflammatory reactions and immune system activation, leading to adverse effects.

Studies have shown that certain lipid formulations used in these nanoparticles can cause tissue damage, inflammation, and even systemic reactions in some individuals. These findings raise questions about the long-term effects of lipid nanoparticles on human health.

Two of the lipids in Pfizer Covid-19 vaccines are ALC-0159 and ALC-315, as confirmed by the assessment report of the Pfizer Covid-19 vaccine [published by the European Medicines Agency](#).

2.2.1. Introduction

The finished product is presented as a concentrate for dispersion for injection containing 225 µg/ 0.45 mL (prior to dilution) of BNT162b2 (5'capped mRNA encoding full length SARS-CoV-2 Spike protein) as active substance (AS).

Other ingredients are: **ALC-0315** (4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), **ALC-0159** (2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide), 1,2-

Distearoyl-sn-glycero-3-phosphocholine (DSPC), cholesterol, potassium chloride, potassium dihydrogen phosphate, sodium chloride, disodium phosphate dihydrate, sucrose and water for injections.

[Source – Page 14](#)

But both of these lipids carry manufacturer's warnings that state they are **never** to be used in humans or animals.

As you can see for yourself, it tiny writing at the bottom of the product inserts [here](#) and [here](#).

PRODUCT INFORMATION

ALC-0159

Item No. 34336

CAS Registry No.: 1849616-42-7

Formal Name: α-[2-(ditetradecylamino)-2-oxoethyl]-ω-methoxy-poly(oxy-1,2-ethanediyl)

MF: (C₂H₄O)_nC₃₁H₆₃NO₂

Purity: ≥95%

Supplied as: A solid

Storage: -20°C

Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

[Source](#)

Another aspect of concern is the biodistribution of lipid nanoparticles in the body. Once injected, these

nanoparticles can spread beyond the injection site and distribute throughout various tissues and organs.

While this property is crucial for the efficient delivery of mRNA, it also raises questions about potential accumulation and persistence of these nanoparticles in critical organs. Limited research has been conducted to assess the long-term retention and potential toxic effects of lipid nanoparticles in the body.

Furthermore, the use of lipid nanoparticles in Covid vaccines highlights the need for further scrutiny regarding their potential impact on reproductive health.

Animal studies have demonstrated that certain lipid formulations used in these nanoparticles can accumulate in reproductive organs and interfere with fertility.

While the available data is limited, it underscores the importance of thoroughly investigating the effects of lipid nanoparticles on reproductive health, especially considering the widespread administration of these vaccines.

The Horror of Graphene in the Bloodstream:

Graphene Oxide is a fairly new substance not yet well understood.

But what we do know is that studies have proven it can be toxic to cells and tissues in the body, and if graphene was injected into the bloodstream, it could have disastrous consequences for human health

Graphene is a two-dimensional material made up of carbon atoms arranged in a hexagonal lattice. It has been shown to have some remarkable properties, such as being incredibly strong, flexible, and conductive.

However, it is also highly reactive and can interact with biological molecules in the body, potentially causing harm.

Research has shown that graphene can induce oxidative stress, which can damage cells and lead to inflammation.

It can also cause damage to DNA and disrupt cellular membranes, which can lead to cell death. .

Injecting graphene into the bloodstream could cause a range of health problems, such as organ damage, blood clotting, and inflammation

This is because the intrusion of graphene disrupts the harmonious equilibrium, paving the way for a myriad of health crises that threaten to engulf humanity.

This is why it's extremely concerning to find Graphene Oxide (GO) has been in and out of the news for the past two years in relation to the COVID-19 vaccines developed by Pfizer-BioNTech and Moderna.

mRNA Technology: Pfizer and Moderna's Sinister Agenda:

Central to this dystopian reality is the involvement of pharmaceutical giants Pfizer and Moderna, infamous for their utilization of mRNA technology in alleged Covid-19 vaccines.

While mainstream institutions hail these mRNA-based vaccines as breakthroughs in medical science, we must dig deeper to uncover the potential perils they bring.

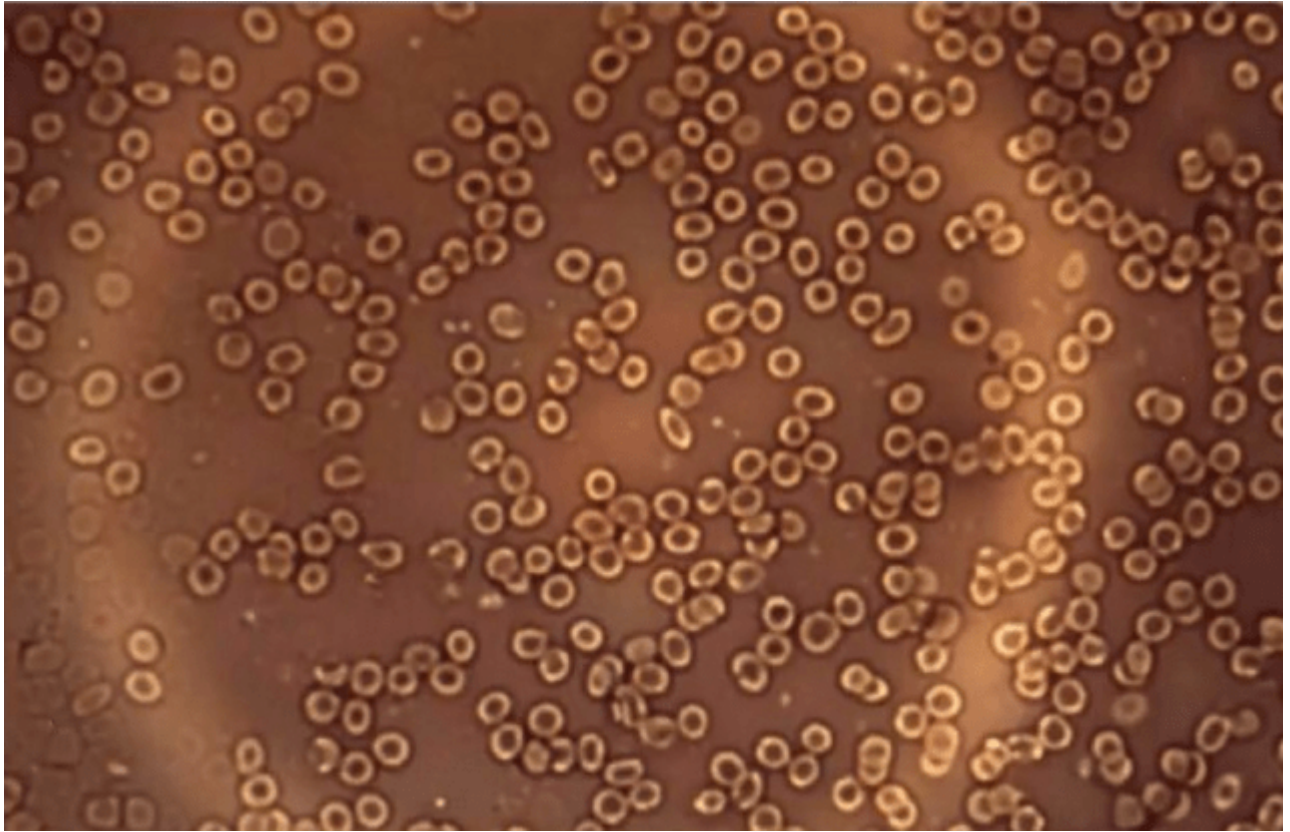

The mRNA technology, which utilizes genetic instructions to stimulate an immune response, raises concerns about long-term genetic alterations, unforeseen autoimmune reactions, and the erosion of bodily autonomy.

We have to question the true motives behind the rapid deployment of this technology and its potential exploitation by powerful entities.

Several independent studies conducted by doctors and scientists have confirmed that Graphene Oxide is in fact present in the Covid-19 vaccines. But the manufacturers, medicine regulators and so-called Fact-Checkers have refuted these claims, most likely due to the known toxic effects it has on the body.

Dr. Philippe van Welbergen conducted a study of the mRNA Covid-19 vaccines in which he concluded Graphene Oxide was not only present in Covid-19 vaccines, but also being transmitted from the COVID vaccinated to the unvaccinated, destroying red blood cells & causing strange blood Clots.

Below is an image, taken from Dr. Philippe van Welbergen's study, of typical healthy red blood cells as seen with a microscope, what blood should look like. There is no coagulation or foreign objects in it.

The next image is of a person who had been injected with the experimental Covid mRNA vaccine.

The blood is coagulated, and the misshapen red blood cells are clumped together.

The cell encircled in the image is a healthy red blood cell, one of the few in the image, sitting alongside what Dr. Philippe van Welbergen claims to be graphene fibres. Fibres of this size will block capillaries.

According to Dr. Philippe van Welbergen, the graphene fibres in the image are also hollow and contain red blood cells.

You can read a full analysis of Dr. Philippe van Welbergen's study on Covid vaccines [here](#), in which he claims Graphene is shedding from the COVID vaccinated to the unvaccinated, forming strange blood clots & decimating blood cells.

Whilst we can not confirm Graphene is an official ingredient of the Covid-19 injections due to the denials of the manufacturers, we can confirm that it's perfectly possible for it to end up in the body due to the manufacturing process of the Covid-19 injections.

What were they trying to hide?:

The Pfizer Covid-19 vaccine is an injection that contains genetic material called mRNA that invades the cells in your body and instructs them to produce the Spike (S) protein allegedly found on the surface of the SARS-CoV-2 virus.

It is a highly complex “vaccine” that involves a multi-step manufacturing process that includes the production and purification of messenger RNA (mRNA) molecules and the formulation and packaging of the vaccine.

And according to Pfizer, it is required during the manufacturing process of its Covid-19 vaccine. But we only know this thanks to a U.S. Federal Court Judge ordering the U.S. Food & Drug Administration (FDA) to publish all the documents that Pfizer submitted to gain Emergency Use Authorization.

For those who don't know, the Covid-19 injections had not completed phase 3 and 4 trials, so could not be fully approved in December 2020. Instead, they had to be authorized for emergency use only. This is why it's criminal that they extended the EUA to children, considering they are at little to no risk of suffering anything more severe than the common cold if infected with the alleged SARS-CoV-2 virus.

If the Federal Court Judge had not forced the FDA to publish the documents, they wouldn't have seen the light of day for 75 years. Because this is the length of time the FDA requested they be given to publish the documents under the Freedom of Information Act.

However, a group of scientists and medical researchers sued the FDA to force the release of hundreds of thousands of documents related to the Emergency Use Authorization of the Pfizer-BioNTech Covid-19 vaccine.

And in early January 2022, Federal Judge Mark Pittman ordered the FDA to release 55,000 pages per month, and since then, PHMPT has posted all of the documents on [its website](#) as they have been published.

Sadly, one of the most recent documents published by the FDA, saved as [125742_S1_M4_4.2.1 vr vtr 10741.pdf](#), confirms the use of Graphene Oxide in the manufacturing process of the Pfizer Covid-19 vaccine. Proving that medicine regulators the mainstream media, Fact Checkers and Pfizer have all been lying to you.

The document is a description of a study carried out by Pfizer between April 7th 2020 and 19th August 2020, with the objective being “to express and characterize the vaccine antigen encoded by BNT162b2.”

In layman's terms, the study was conducted to determine how the vaccine works. The study found that the vaccine used mRNA to instruct your cells to produce a protein (called P2 S), which is the Spike protein of the alleged Covid-19 virus.

The millions of spike proteins then bind to a receptor called ACE2 on the surface of your cells, inducing an immune system response.

But what is most concerning about the study is the confirmation on page 7 that Graphene Oxide is required to manufacture the Pfizer Covid-19 vaccine.

Pfizer states on page 7 of the study in section 3.4 the following –

3.4. Cryo-EM of P2 S

For TwinStrep-tagged P2 S, 4 μL purified protein at 0.5 mg/mL were applied to gold Quantifoil R1.2/1.3 300 mesh grids freshly overlaid with graphene oxide. The sample was blotted using a Vitrobot Mark IV for 4 seconds with a force of -2 before being plunged into liquid ethane cooled by liquid nitrogen. 27,701 micrographs were collected from two identically prepared grids. Data were collected from each grid over a defocus range of -1.2 to -3.4 μm with a total electron dose of 50.32 and 50.12 $\text{e}^-/\text{\AA}^2$, respectively, fractionated into 40 frames over a 6-second exposure for 1.26 and 1.25 $\text{e}^-/\text{\AA}^2/\text{frame}$. On-the-fly motion

[Source – Page 7](#)

Therefore, during the manufacturing process, several factors could potentially introduce contaminants or foreign materials into the vaccine. This obviously includes the possibility of varying amounts of Graphene Oxide (GO) entering the final product.

One potential source of Graphene Oxide contamination could be the use of raw materials or reagents that contain the toxic substance or other graphene-based materials.

For example, if one of the reagents used in the manufacturing process contains Graphene Oxide as a contaminant, this could potentially introduce Graphene Oxide into the vaccine.

Similarly, if the equipment used in the manufacturing process is not properly cleaned or validated, this could lead to Graphene Oxide contamination of the vaccine.

Another potential source of Graphene Oxide contamination could be through the use of filters or other materials used to sterilize or purify the vaccine.

While these materials are designed to remove contaminants and foreign materials, they could potentially introduce Graphene Oxide into the vaccine if they are not properly designed or validated.

But this information only touches the tip of the iceberg.

Graphene Nanobots and Their Capabilities:

Graphene nano bots are tiny robots made of graphene that can be programmed to perform specific tasks in the body. They are being developed for a range of medical applications, such as targeted drug delivery and cancer treatment.

They can be programmed to target specific cells or organs, and their small size allows them to penetrate deeply into tissues.

However, the potential uses of graphene nanobots are not limited to medical applications. They could also be used for surveillance, with the ability to enter a person's bloodstream and gather information about their body and surroundings.

The Dystopian Implications of Graphene Nanobots:

While the potential uses of graphene nanobots may sound impressive, there are many dystopian

implications to consider.

The potential risks of using graphene nanobots in the body are not fully understood.

There are concerns that the graphene nanobots could have unintended consequences in the body, such as damaging healthy cells or causing an immune response.

They could also potentially be used for nefarious purposes, such as espionage or assassination. As with any new technology, it is important to carefully consider the potential risks and benefits before deploying it in the real world.

Amidst this perilous journey, the convergence of graphene nanobots, mRNA technology, and nanotechnology engenders a dystopian nightmare that chills the soul.

These minuscule robotic entities, shrouded in the promise of advancement, hold the potential for unspeakable harm.

As they stealthily navigate the bloodstream, infiltrating organs and tissues, they bring forth unauthorized surveillance, manipulation of bodily functions, and unfathomable risks to human health.

The orchestration of this surreptitious invasion redefines the boundaries of control.

It will plunge humanity into a state of perpetual vulnerability.

Nanotechnology's Malevolent Web:

Nanotechnology is a broad field that encompasses a wide range of technologies and applications.

In the context of medicine, nanotechnology has the potential to revolutionize the way we diagnose and treat diseases.

However, the use of nanotechnology in the human body is not without risks.

There are concerns that nanoparticles could potentially accumulate in the body and cause harm over time. They could also potentially interact with biological molecules in unexpected ways, leading to unintended consequences.

Additionally, the use of nanotechnology could potentially raise ethical and social concerns, such as issues around privacy and informed consent.

The entanglement of nanotechnology, graphene nanobots, and mRNA technology spawns a perilous tapestry of interconnected threats.

Injecting nanotechnology into the bloodstream, often through mRNA-based vaccines, unveils a Pandora's box of consequences.

The manipulation at the molecular level disrupts delicate biological processes, compromises the immune system, and unleashes unforeseen reactions within our bodies.

The long-term effects of such invasive interventions remain a haunting enigma, leaving humanity at the mercy of untold risks and irreversible damage.

There are concerns about the potential risks and side effects of nanotechnology injections, including those utilizing Graphene nanobots. Some potential consequences include:

1. **Immune System Reactions:** Nanoparticles can trigger immune system reactions, leading to inflammation, allergic reactions, and potentially even autoimmune diseases.
2. **Toxicity:** Some nanoparticles can be toxic and accumulate in the body over time, leading to damage to organs and tissues.
3. **Blood Clots:** There are concerns that nanoparticles could trigger blood clots or other cardiovascular problems, especially in individuals with pre-existing conditions. We have already seen evidence of this with Covid-19 injections.
4. **Unknown Long-Term Effects:** The long-term effects of nanotechnology injections are still largely unknown, as there have not been extensive studies on their safety and efficacy.
5. **Ethical Concerns:** The use of nanotechnology in medicine raises ethical concerns about potential unintended consequences, including the possibility of creating new social or economic inequalities, as well as concerns about privacy and data security.

The Quest for Truth and Liberation:

In a world suffocated by deceit and manipulation, the pursuit of truth and liberation becomes our guiding light.

As we navigate the dystopian nightmare of graphene nanobots, nanotechnology, and mRNA technology, we challenge the status quo with unwavering resolve.

Armed with credible sources, independent research, and an insatiable hunger for truth, we expose the hidden agendas and unmask the malevolent forces at play.

By demanding transparency, accountability, and ethical practices, we seize the power to shape a future free from the clutches of corporate tyranny and dystopian nightmares.

The dystopian, harmful, and dangerous consequences of graphene nanobots, mRNA technology, and nanotechnology can no longer hide in the shadows.

Critical thinkers, who are labelled as conspiracy theorists by mainstream puppets, are driven by an unyielding determination to challenge the Establishment.

But every single person on this planet should embrace the quest for truth, demand transparency, and help forge a path towards a world that safeguards individual freedoms, protects human rights, and rejects the clutches of the dystopian nightmare 9 out of 10 people do not even realise they are living in.

Conclusion: Plunging into the Abyss of Absolute Horror

As we unravel the chilling secrets and delve deeper into the dark underbelly of graphene nanobots, mRNA technology, and nanotechnology, a bone-chilling truth emerges—the dystopian nightmares we

once dismissed as mere fiction are becoming our harrowing reality.

The consequences that lie in wait are nothing short of a cataclysmic descent into a world marred by unimaginable horrors. We must brace ourselves for the impending storm and unite against those who seek to enslave and extinguish the flame of human freedom, as the sinister machinations of the Establishment reveal themselves in all their grotesque glory.

Graphene nanobots, injected into the bloodstream, may well be the harbingers of our undoing.

These microscopic entities, once unleashed, could wreak havoc on our health, causing unimaginable damage to our vital organs and leaving us at the mercy of those who control this technology.

Every organ, every nerve, every ounce of our being will become their domain, subjecting us to an insidious form of surveillance and manipulation.

With every passing heartbeat, we inch closer to a nightmarish reality where our thoughts, our desires, and our very identities are no longer our own.

The insidious nature of mRNA technology cannot be understated either.

Not now that it has been injected into billions of people multiple times through Pfizer and Moderna's Covid-19 injections.

The wealth of evidence proves it now surges through their veins like a venomous toxin, rewriting the very code of their existence and redefining what it means to be human.

The sad truth is that we are but mere puppets in a grand experiment, manipulated by unseen hands and few seen hands, such as a certain Mr Bill Gates and Mr Klaus Schwab, that revel in their sadistic control over our lives.

Pfizer and Moderna are the architects of our collective demise, and most likely relish in their roles as puppet masters, orchestrating a symphony of suffering and despair.

With every Covid-19 injection administered, and every future mRNA injection administered, they inch us closer to a dystopian hellscape where individuality and freedom are extinguished like flickering embers.

And their unholy alliance with the Establishment solidifies their dominion, as they weave a web of deceit and oppression, ensuring that we remain perpetual subjects in their malevolent game.

But only if we let them.
